Story

THE MODULE

Magento - Environments is an intuitive Magento module that will automatically update values in *core_config_data* for you. It will ensure that you always have the correct value for *web/unsecure/base_url*, *carriers/freeshipping/active* or other settings like API credentials of third-party components on your **Development**, **Staging** or **Pre-Production** environment.

In short, there is no more need to waste time and being frustrated by updating values manually via command-line before you can start with your actual work.

Funding period

Dec 7 2015 - Dec 28 2015 (21 days)

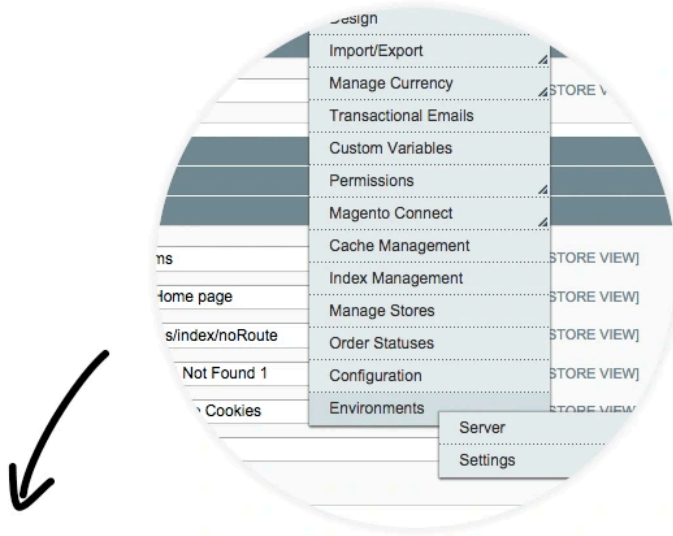

```
... path like '%base_url%',
-----
id | path | value
-----
0 | web/unsecure/base_url | http://ce.tobiasfo
1 | web/secure/base_url | http://ce.tobiasfo
2 | web/unsecure/base_url | http://ce.tobiasfo
-----

data set value = 'http://dev.tobiasforkel.local/' where c
0.01 sec)
Warnings: 0

nfig_data where path like '%base_url%';
-----
id | path | value
-----
1 | web/unsecure/base_url | http://dev.tobiasf
2 | web/secure/base_url | http://ce.tobiasf
3 | web/unsecure/base_url | http://ce.tobi
```

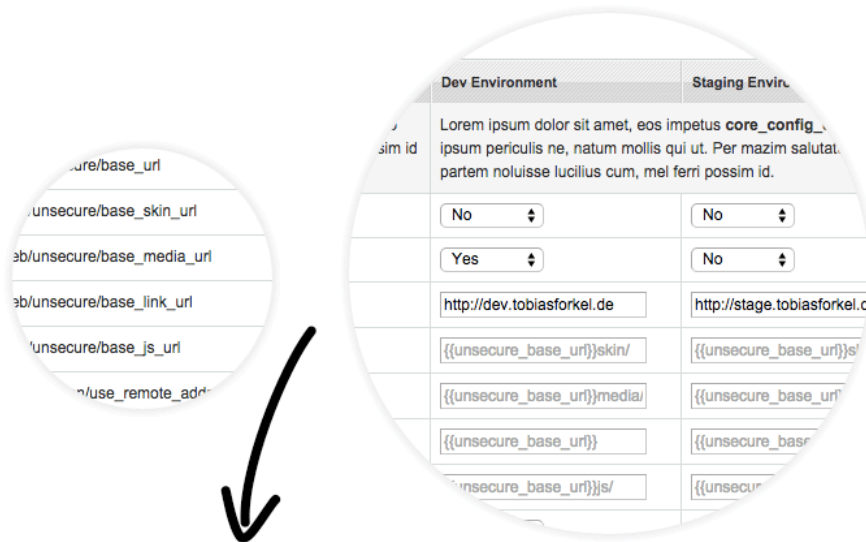

ADMIN PANEL

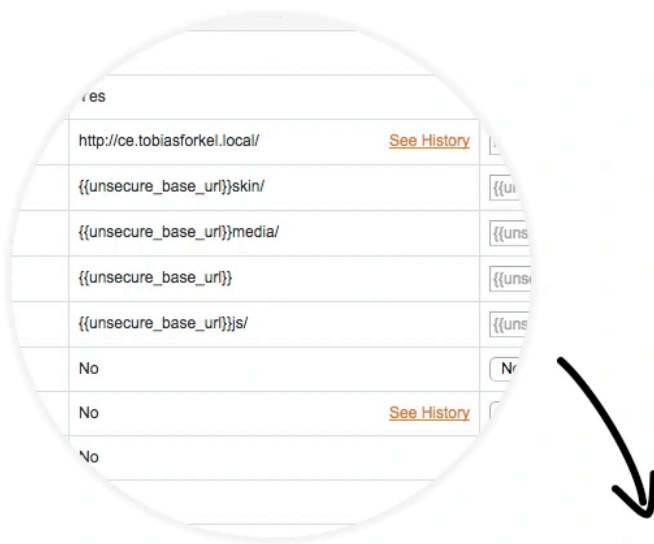

Magento - Environments main functionalities are available in Admin > System > Environments. It provides with different filters like Configuration, Environments and Scopes (Global, Website, Store). All filter options are generated dynamically based on data from *core_config_data*.

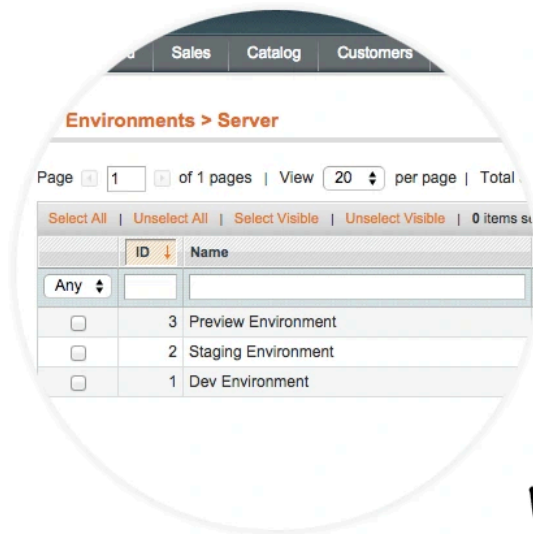

Magento - Environments comes with a grid table which allows you to compare and set different values in *core_config_data* for your **Development**, **Staging** or **Pre-Production** environment.

Magento - Environments comes with a snap shot functionality that allows you to see a history of all changes made in System > Configuration. It will show you detailed information with a timestamp and username.

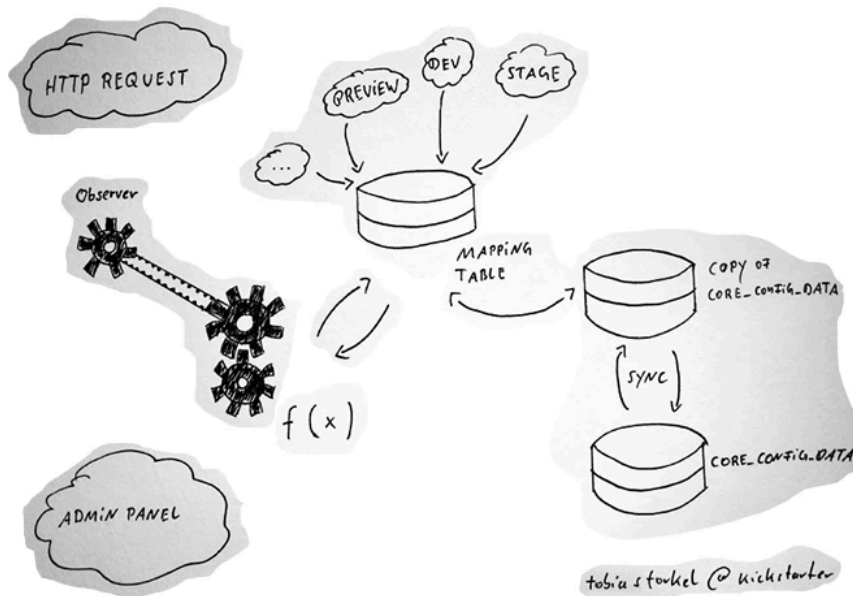

With **Magento - Environments** you are able to add or delete as much server as needed such as *sprint-7.server.com*.

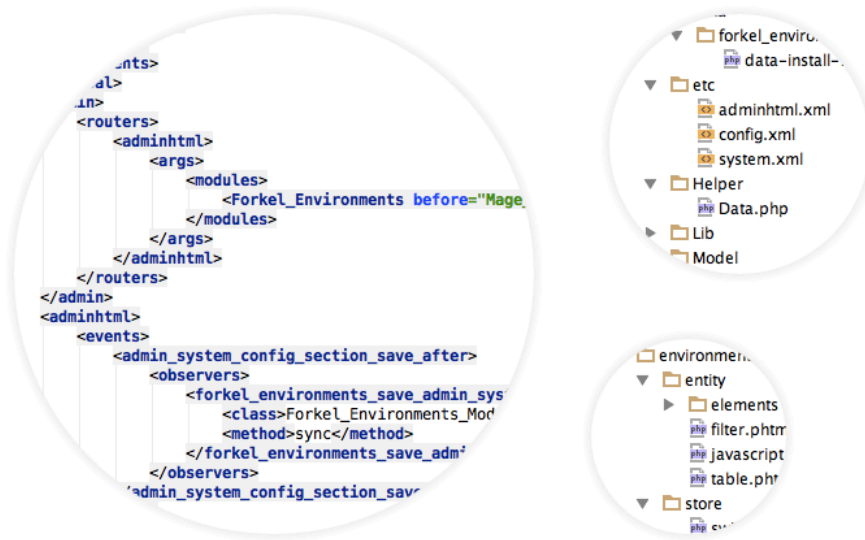

Please see the latest full admin panel screenshot [here](#).

DIAGRAM

CODE

Magento - Environments works with a permanently synced copy of `core_config_data` to ensure you can always revert your changes to their original value. A method called `sync` will do most of the cool stuff, every time the host name matches with one of the server in Admin > System > Environments > Server.

If a host name doesn't match with any entry in Admin > System > Environments > Server you can be 100% sure that **Magento - Environments** will **not** do any changes in *core_config_data*.

QUALITY

Discussions around coding styles and standards are very important. You can be sure that I will follow common coding styles and standards like:

- No rewrites (if possible)
- Simple SQL queries (no raw queries)
- Small collection loads
- Simple and readable PHP code
- No use of dangerous functions
- No use of PHP super globals

SUPPORT

1. Online Guides

- Available right after project launch.

2. Warranty*

- Warranty includes technical defects and conflicts with "core" modules or other Magento core functionalities.
- Warranty does not include conflicts with other "community" or "local" modules.

3. Updates**

- All micro, major and minor updates are free for all contributors.

4. Compatibility

- Magento 1.9.x
- Magento 2.0.x

CONTACT

For urgent requests don't hesitate to contact me at
kickstarter@tobiasforkel.de.

CONTRIBUTORS

Code needs to be carefully tested and simplified. After prototyping, innovating and functional tests, I noticed that I need at least another month to release a stable version. With your help I will be able to complete this project by focusing on code simplification, adding new features and testing. For all contributors I offer warranty up to 6 month, free updates and technical support up to 100 days after delivery.

Risks and challenges

The risk is that I can't deliver in-time because of use-cases discovered during testing that require additional work. To be realistic I have set the estimated delivery time to march 2016 with the conviction and motivation that I will be able to deliver before that deadline.
