About

2018-01-17 - New Version of Visual Scripting System, Data Viewer and Media Manager Coming to Beta!

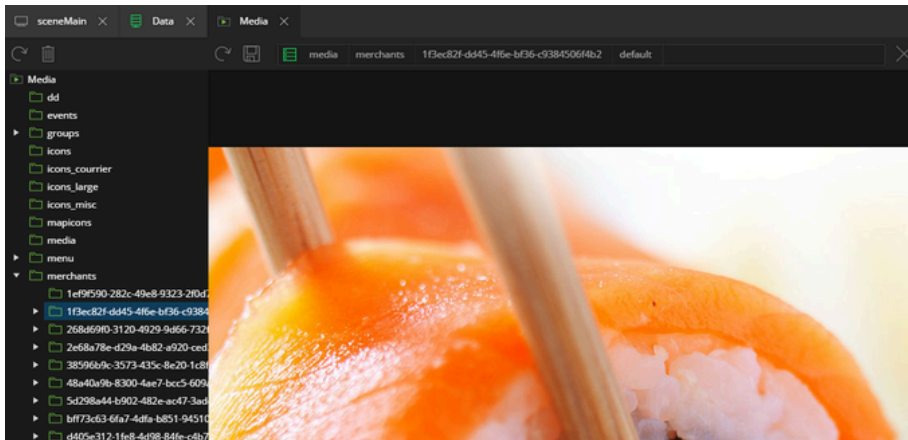

Visual Scripting System 2.0

The new and improved visual scripting editor will be available for beta testers in a couple of weeks. This new version offers a revamped user interface and introduces visual scripting on the server side.

*Data Viewer*

The new data viewer allows you to quickly browse and edit any data files saved on the server. These files are in JSON format and easy to read.

*Media Manager*

The media manager allows you to upload and view images, sounds, videos to and from your project.

Project Information

Who am I

My name is Mathieu Dalpé. I'm 31 years old from Canada. I've been writing code since the age of 12. I'm currently a contract software engineer for multiple companies such as Just-Eat Canada and DeliveryDirect. I also do graphic design, music, video editing (I made the presentation video) and a lot more. This project was born out of the dream of wanting the perfect tool for

crafting software. I've been using it for years to make software for myself and now I want to share it with the world!

Overview

CloudScript is an online app development studio. It's easy to use for beginners and powerful for experts. The software is already in Alpha and apps built with it are already being used by multiple companies. Funding will be used for marketing and hiring people to advance the project to the next level. CloudScript will be marketed as a subscription based hosting service for your apps built with the editor. Since everything is in the cloud you can resume work on your CloudScript project from any computer in the world. Collaboration tools allows multiple people to work on a single project without conflicts.

Create apps that run on every platform

Multiplatform - Build your app once

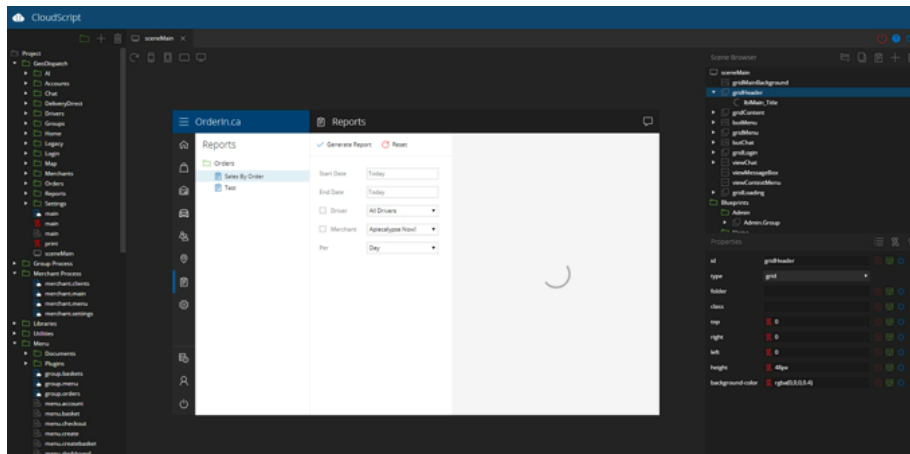

CloudScript apps run on every platform: Windows, Android, Chromebook, iOS, Mac and Smart TVs. This means you only have to create one version of your app and can be certain it will behave the way it should everywhere!

What is CloudScript?

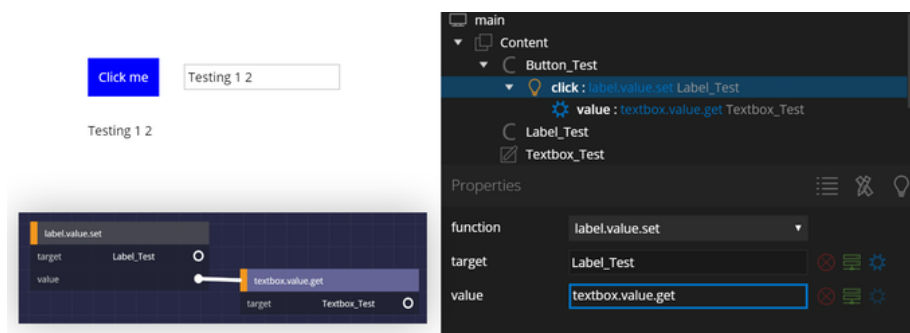

CloudScript is a web-based integrated development environment for web applications. It has the power of high-end development suites like Visual Studio but with the user-friendliness of solutions like Wix or Squarespace.

CloudScript is perfect for small and medium size businesses who need a quick and effortless way to build software such as inventory and assets management, communication, booking, scheduling. It's easy for beginners

who want to learn how to code and limitless for enthusiasts who want to create the next big thing.

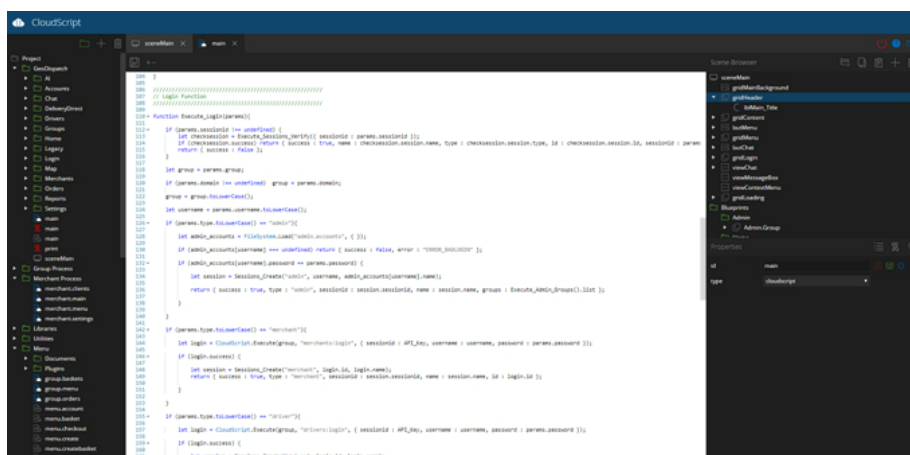

The CloudScript Editor

CloudScript Visual Scripting and Diagram View

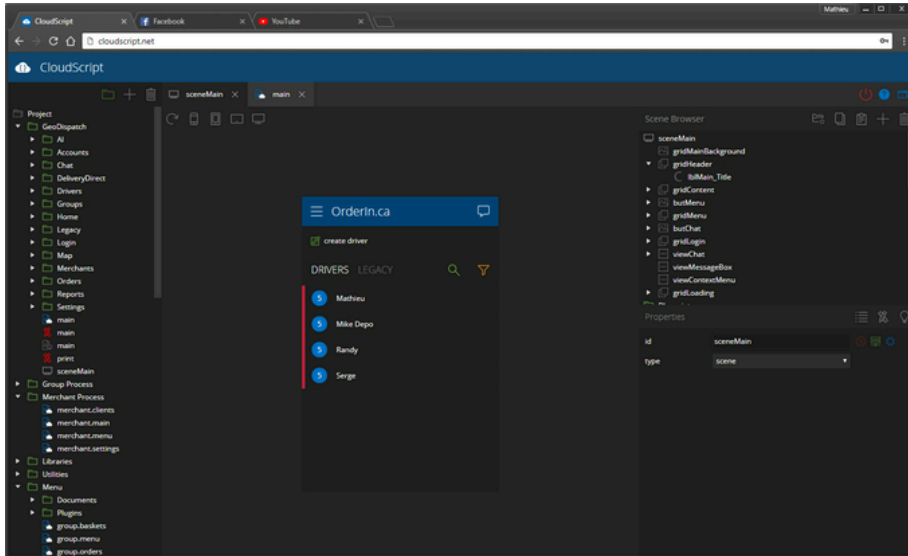

CloudScript allows you to write complex algorithms without having any prior programming experience thanks to its visual scripting system and its dynamic contextual documentation.

Large teams can easily work on a project without having to worry about synchronizing modifications. A simple press of a button will publish any changes made and have them available to use instantly

Server-side APIs can be written and be made available to use in a matter of seconds using JavaScript. Code suggestions and documentation will appear as you write and coding errors will be made visible and clearly detailed.

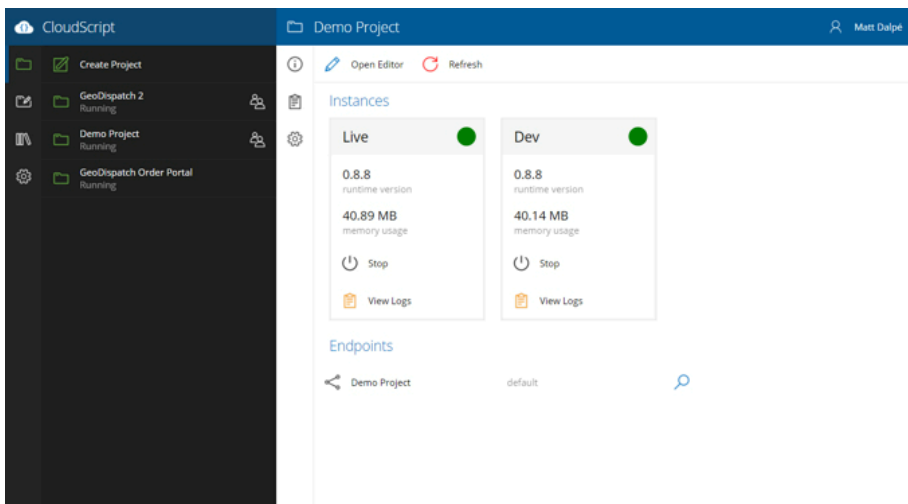

Taking advantage of multi threading is easier than ever and will allow you to run huge tasks without slowing down the entire application.

The CloudScript editor works in any modern browser

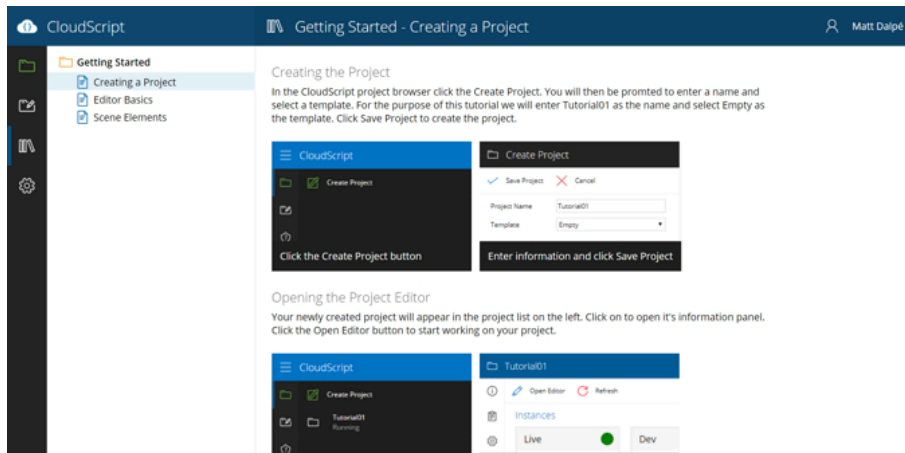

The user interface designer features all the tools you would expect from an enterprise-grade software development suite and device previews allows you to see what your application will look like on phones, tablets, and desktop PCs.

Data binding allows you to dynamically display lists of data and listbox virtualization ensures that no matter how much data is displayed performance will always be top-notch.

The CloudScript Member Dashboard: Projects

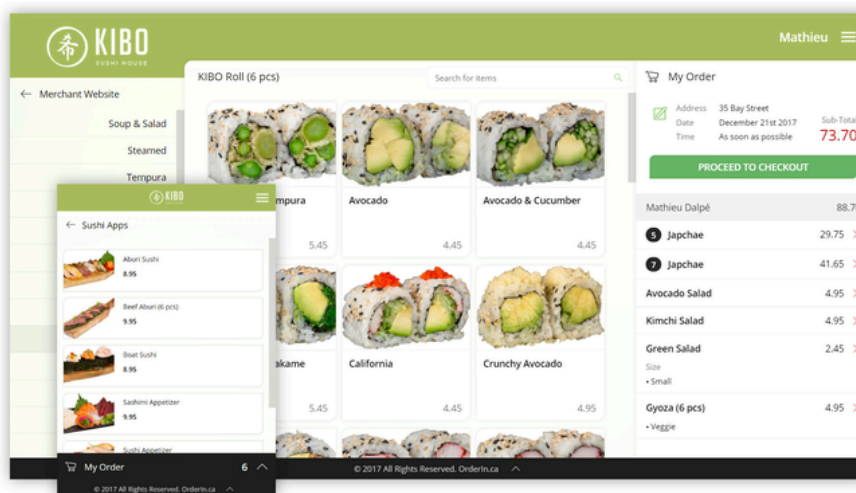

CloudScript makes your life easier thanks to its cloud-based environment, no software has to be ever installed. Your team members can start working from any computer anywhere in the world.

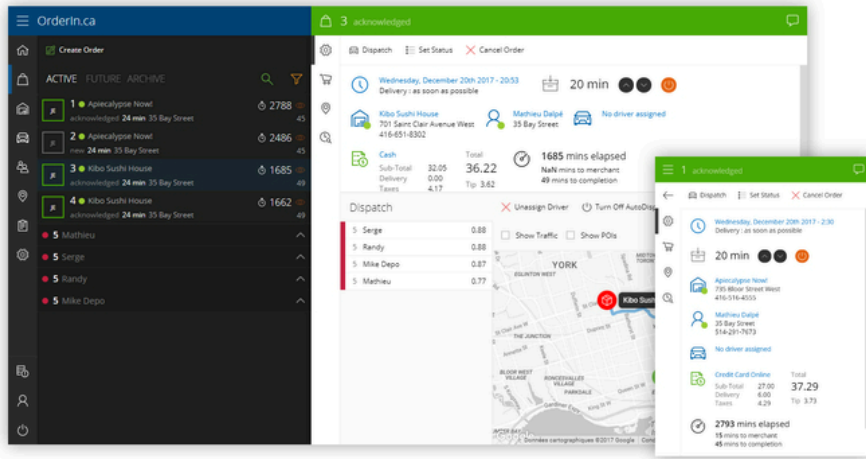

The CloudScript Member Dashboard: Tutorials

CloudScript is based off the world's most popular and easy to learn language, JavaScript. Your projects can be as simple or as complex as you wish and none of your time will be wasted trying to figure out how to have your application ready for consumption.

Built with CloudScript

OrderIn: Online ordering platform built entirely with CloudScript

GeoDispatch: State of the art dispatching software built entirely with CloudScript

How will the funding be used?

Since the project is already built and functional, funding will be used to market the product and cover initial server costs and hire staff for further testing, development and support.

Risks and challenges

The project is already built and functional. Apps built with CloudScript are being used by companies such as Just-Eat Canada, DeliveryDirect, OrderIn.ca and GeoDispatch so that's one challenge out of the way.

Going forward I think the pricing structure/business model may have to be adjusted to offer the best price, cost and features ratio.

Initial demand may become overwhelming. We may have to limit the amount of first customers we can sign up to be able to offer adequate support.
