Story

What Key Are We In?

Ever since the advent of computer-based music, composers spend precious minutes of their day just trying to get the right sound to play back. Montreal Music Labs is creating a singular solution for all music composers and producers with their computers to control and edit virtual instrument articulations and key switches.

It works with all major third party libraries and players, including Kontakt, VSL, Play, and more.

Fresh off of MML's first major release VM1 (an iPad controller application for VSL's Vienna Ensemble Pro 7) we are now concentrating on simplifying yet another crucial part of the composer workflow.

Creating Music Should be Fun!

Montreal Music Labs creates technical products for creative people. We know from experience that technology can be a roadblock when you want to just sit down and write music. We're here to simplify how people make music on computers.

Funding period

Nov 20 2019 - Dec 20 2019 (30 days)

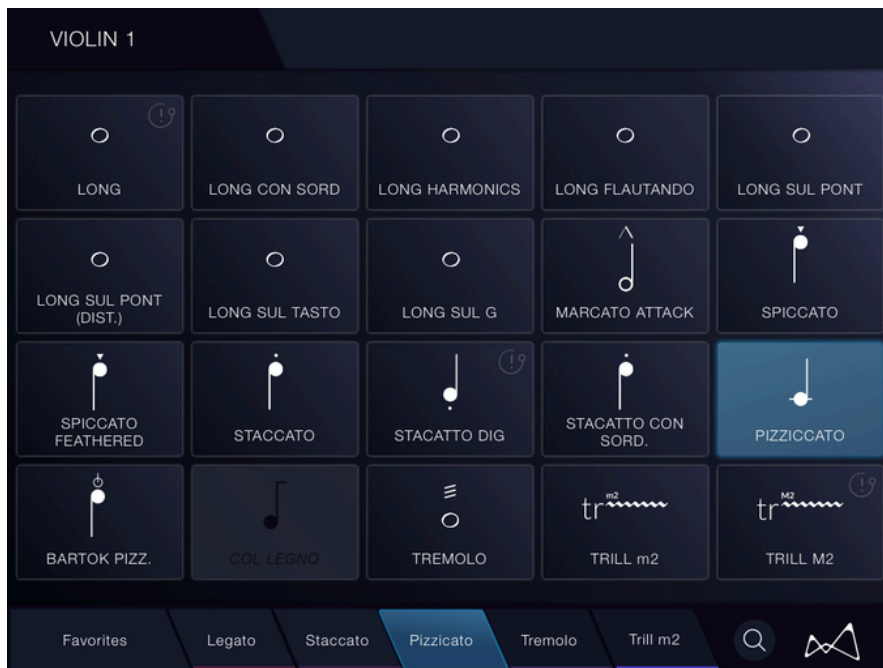

NO More Fumbling Around!

Which note do I press? Which octave is it? Which color means what? Do I really have to enter a note at the beginning of each bar? Here at Montreal Music Labs we have been developing a better way of viewing exactly what you need to access.

Introducing Montreal Music Labs Articulate App!

*Runs on an iPad**

*All articulations, easy to understand.**

MML's Articulate is an integrated AU/VST/AAX plugin and touchscreen app solution that gives Music Composers quick control with minimal user configuration.

Remembering where each instrument's articulations are on the keyboard is a daunting & tedious task. With Articulate, all of your articulations appear on the iPad as simple buttons. Just select the desired articulation and it will be stored as automation - not MIDI - in your DAW. This allows for much easier editing and for standard automation functions such as touch,

latch and overwrite to be used. No more cryptic editing on multiple midi controller channels.

In a post-release update, you will be able to control the most relevant parameters of the plugin directly from Articulate, helping to add more expression to your music. These will also be stored as automation - which again makes performance and editing much easier. Simply add the plugin, choose a library, and start creating music.

Timeline

The preliminary work has been completed and we are currently refining the product code to make this work smoothly and easily for all our users. We will be releasing a beta version of the application to our testers in early 2020 and plan to officially release to all users in March 2020. Introductory Promo Pricing for MML Articulate will be \$US 79, (approximately \$CA 100) available on the MML webstore.

*All product demonstrations subject to change without notice.

Risks and challenges

As always, staying on top of customer support, stability updates and feature additions is difficult for any software company after a product is initially released. This is why we plan on investing the majority of our KickStarter goal back into development and support. We are quick to adapt and respond to our users, which we believe makes all the difference !

Environmental commitments

[Visit our Environmental Resources Center](#) to learn how Kickstarter encourages sustainable practices.

Sustainable Distribution

As a software company, our products have a very low impact on the environment. Here at MML, servers and data centre use is minimal.

Something else

Montreal Music Labs strongly believes in giving back and contributing to the community at large. Our team has made contributions to organizations such as Music Cares, Children Believe, the Sierra Club, Plan International, World Vision, the Canadian Red Cross, and more.
