WHY VISUALLY ?

The brain processes visual information 60,000 times faster than text!!!

Visual learners retain information quite differently in comparison to their left brained counterparts enabling them to benefit more from different approaches.

This eBook will visualize Python like never before and I can't wait for you to try it.

That You Can Acquire!**

AS FEATURED IN:

MY STORY

Being a web and graphic designer, the struggles involved in learning programming often led me deep in to books and all over the internet in search for help. In search for some explanation that would make the concepts simpler, easier to understand. And as I saw others failing or giving up all together, I knew I had to make a move. Thus, this project came to life.

THE INTERACTIVE EBOOK WILL FOCUS ON:

1. Understanding the basic concepts
2. Building a strong foundation in programming
3. Memorization of the syntax and terminology of the language
4. Work on real world projects
5. Practice, practice, practice

All this will be achieved through the use of Metaphors, Real life objects Analogies and Simple GAME-LIKE Exercises that are so much fun to do.

Associating a Python concept with real life objects followed by a brief example makes a lot of sense:

Full colour illustrations aid in memory trigger as your brain hardly forgets an **image, schema or metaphor**. In fact, one page of a visual guide can equate to a chapter in a conventional book;

Simply put, **illustrations** have greater impact than words on a page:

Exercises completed in a game-like fashion:

MY PREVIOUS PROJECT

My first book "**Learn JavaScript Visually**" proved that the system is working.

I learned a great deal from my first project. I listened very carefully your comments and suggestions and improved my visual system a lot.

The Interactive "Learn Python VISUALLY" is the result of that.

I must admit that I have great conviction in this project and completely believe that it will be of benefit to many who wish to learn and understand the basics of programming.

I hope that you are just as excited as I am about this project and that you feel the urge to help others by becoming a backer right now.

Not only will you be of help to me, but to thousands of others as well, who have tried and given up in despair on learning the Python language.
