Near22

PRIVATE. PRESENT. NEAR.

Near22 – Private. Present. Near. (No-Login Local Chat App)

(Canceled)

A privacy-focused chat app: discover and connect nearby without logins, accounts, or tracking.

Story

Near22 is a privacy-first chat app that lets you connect with people nearby — with no logins, no accounts, and no tracking.

We've already built a working iOS beta on TestFlight. Now, with your support, we'll launch Near22 publicly on the App Store, bring it to Android, and keep it truly independent — no ads, no data sales, no surveillance.

Why We're Building Near22

Most chat apps demand your phone number, an account, and endless tracking. Even for something simple like saying hello to someone nearby, you're forced to hand over your identity.

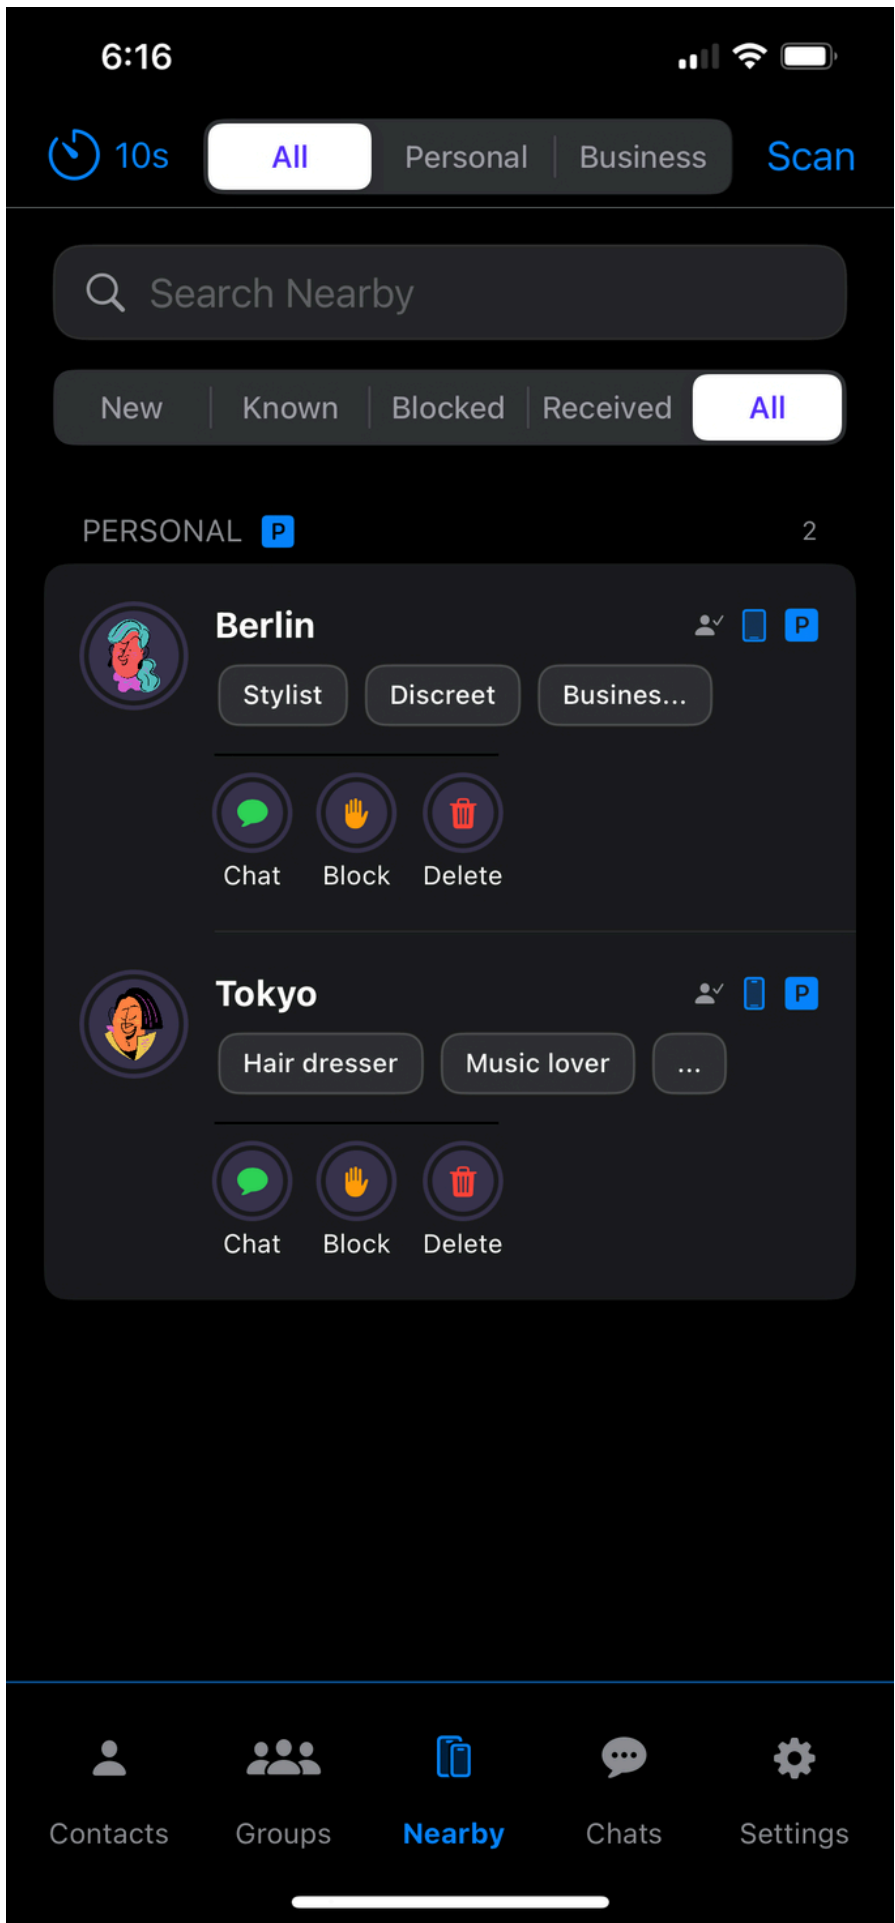

We believe connecting in the real world shouldn't come at the cost of your privacy. That's why we're building **Near22** — a **privacy-first chat app** where you can discover and talk to people nearby instantly, with no logins, no accounts, and no tracking.

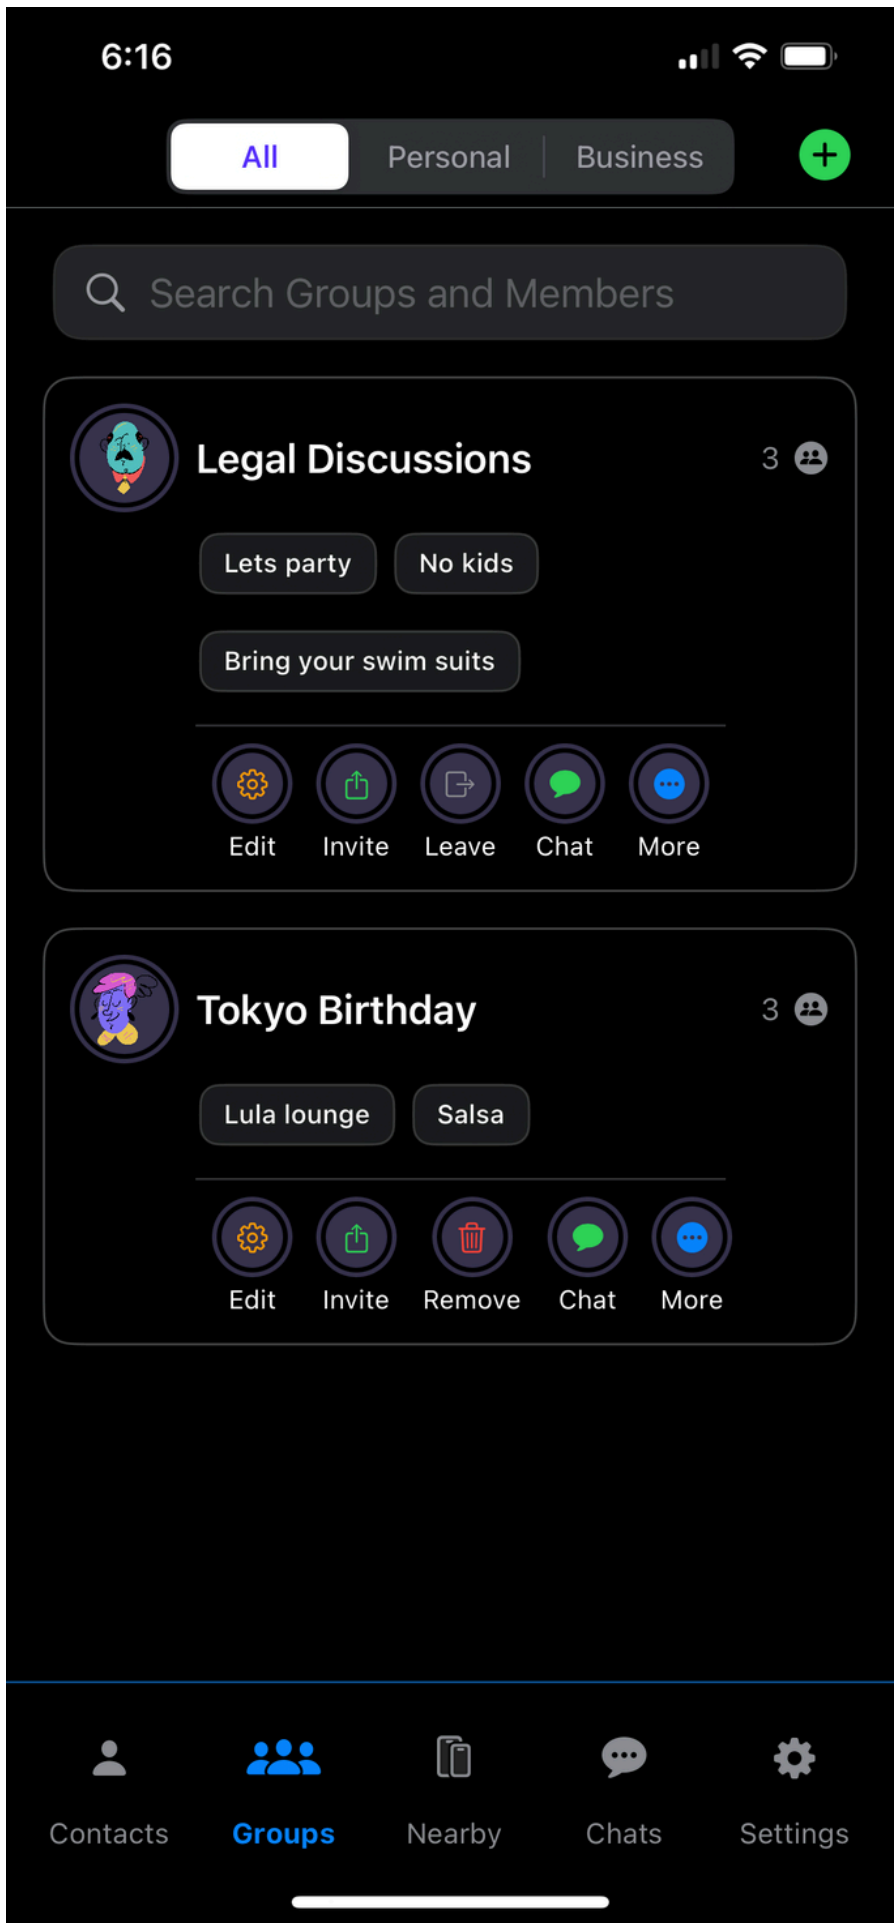

What We've Built So Far

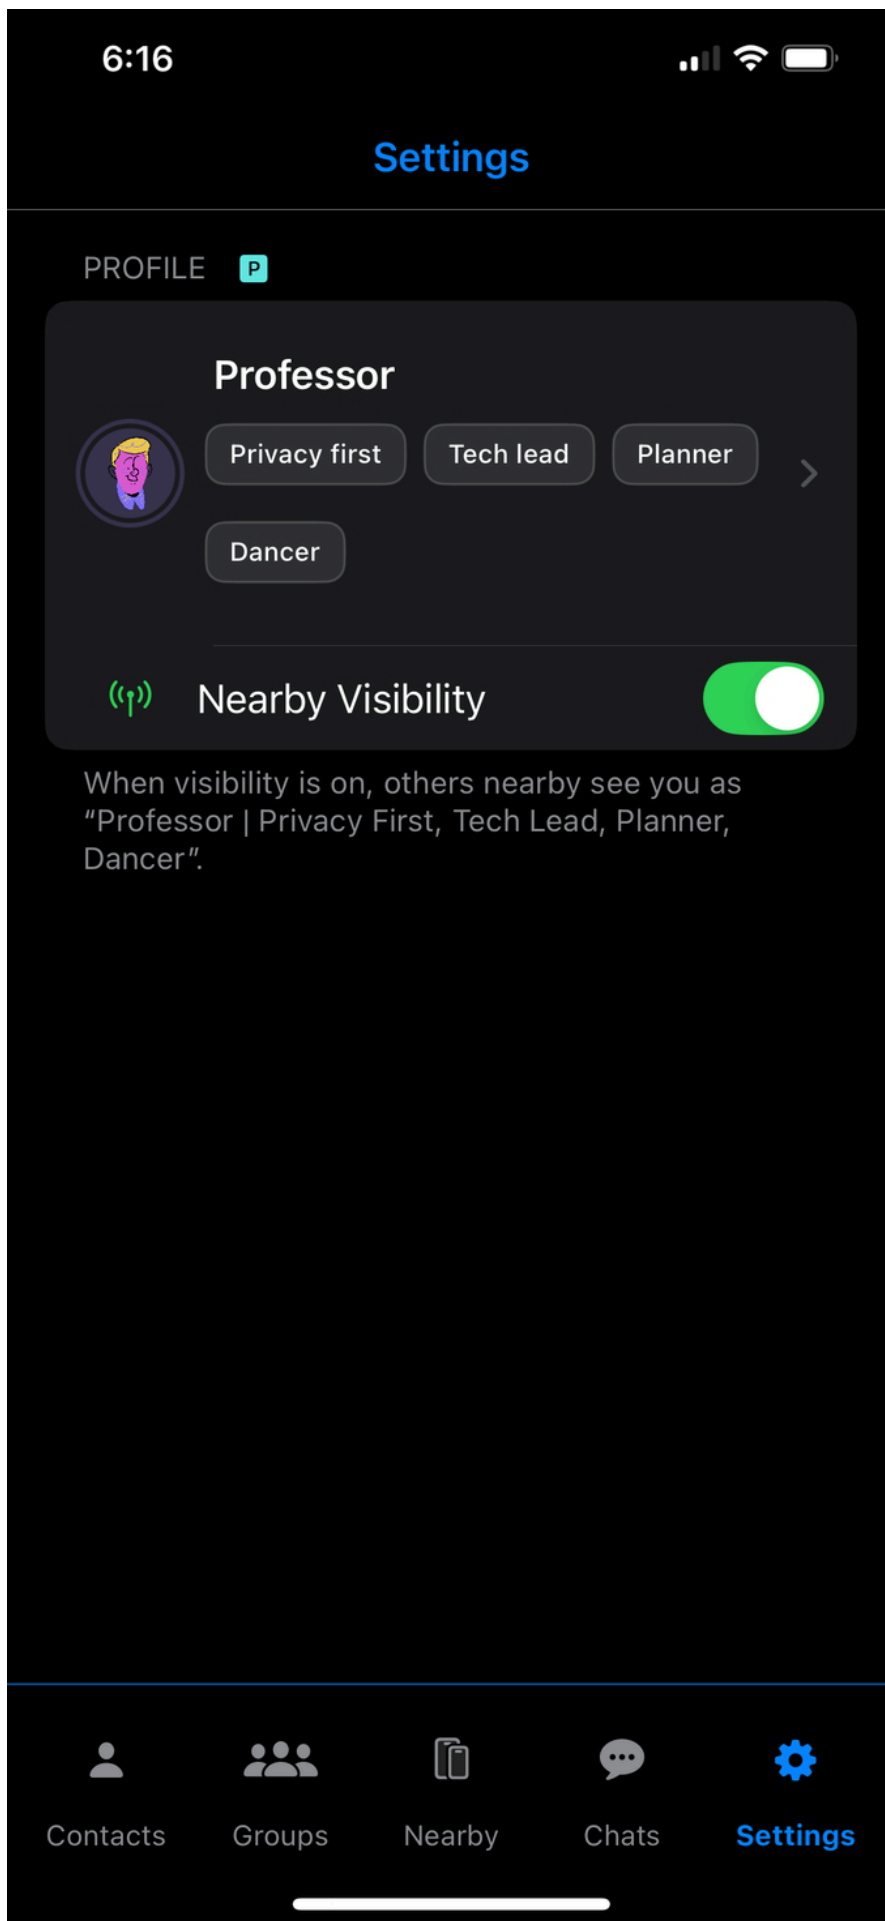

- ✅ iOS TestFlight beta is already live
- ✅ Nearby discovery via Bluetooth
- ✅ Groups, contacts, and chat working in dark and light mode
- ✅ Push notifications (APNs) functioning
- 🚧 Android beta in progress

Funding period

Sep 10 2025 - Oct 23 2025 (43 days)

What We're Raising Funds to Do

- With your support, we will:
- Launch the public iOS app on the App Store
- Release the Android beta
- Add advanced privacy features like local-only queues and BLE optimizations
- Explore small business use cases (private groups, BYOD ordering)
- Our goal is to keep Near22 **independent** — supported by backers, not advertisers or data brokers.

How We'll Make It Happen

- We've already developed the core app and infrastructure. With Kickstarter funding, we can:
- Cover hosting and scaling costs
- Finalize iOS App Store release
- Accelerate Android development
- Grow an early community of privacy-first supporters

Who We Are

👋 **I'm Siva Boju**, founder and developer of Near22. I've been building mobile apps and backend systems for years, and I'm passionate about creating a space where people can connect without giving up their privacy.

I've been working solo on Near22, from design to code to infrastructure, and your support on Kickstarter helps make this vision real.

Risks and challenges

App Store review timelines may cause delays.

Bluetooth behavior differs across devices and requires tuning.

Scaling backend services depends on community support.

But unlike many projects, Near22 already has a working beta — so the risk of “never shipping” is low.

Use of AI

My project is not using AI contents for the end users. However, I used AI to generate company logo, and I do use chatgpt and co-pilot a lot to resolve issues around backend setup or to fine tune coding if required. Even the branding and logo are temporary. I am hoping to revisit them with some designers, if and when I raise some funds via campaigns. For now, everything in the app design, development, infrastructure setup (AWS), testing all were done just by me.

Something else

"Near22 is a digital-only product. By design, it reduces environmental impact compared to physical goods: no materials, no factories, no shipping. Our focus on privacy-first communication also minimizes unnecessary data collection and storage, which helps reduce server energy usage over time."
