Story

Don't have time to go to the yoga studio? Away on a business trip? Don't like to work out in a group environment? Stay healthy with yoga.

yogagym is the online yoga service that allows users to access yoga classes anytime, anywhere. Sign up for a silver or gold subscription and get access to yoga instructors at home, in your hotel or on the beach - wherever you want, whenever you want.

yogagym provides 2 levels of yoga training - beginners and advanced. The instructors will provide advice and explanations in the video sessions to give the users the best possible guidance to perform the exercises correct. There will be a chat room and message service with access to online help and yoga instructors to answer questions.

The website and mobile app will be hosted on the Azure platform and the framework will be develop locally. We will use certified experienced yoga instructors to create the educational content and exercises and all content will be recorded in high definition to provide the best user experience.

There is plenty of possibility to add additional features as live sessions, private sessions, accessories, nutrition and more.

Funding period

Feb 12 2016 - Mar 13 2016 (30 days)

Risks and challenges

The project can be divided into 3 phases.

The first phase is to develop the website and mobile app. The challenge will be to stay within budget and on time. To manage the risk we'll have weekly meetings with the developers to complete milestones and evaluate user interface.

The second phase is to develop the content for the applications. The challenge will be to develop the content in a way that is useful and user friendly to the end user. That means the sound and video quality has to be

high definition. To manage this risk we'll create a test group and let them evaluate the content and exercises.

The third phase is to deploy the website and make it available. The challenge is to make sure that the user experience is fast and enjoyable. To manage this risk we'll deploy the website in the Microsoft Azure cloud so we have the flexibility and affordable service model.
