J.A.E.S.A : Next Generation Artificial Intelligence

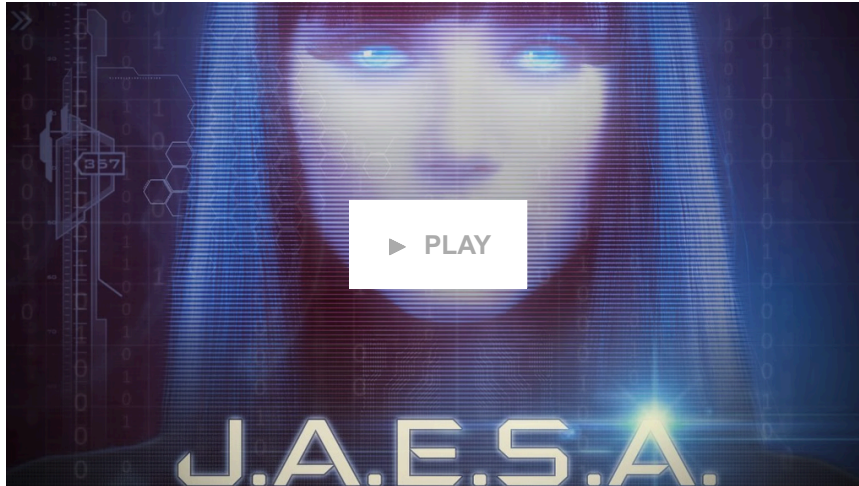

A true next generation AI with the ability to think, learn, adapt and converse freely. Yours for a price of a cup of coffee!

Created by

Ainova Robotics Inc.

2,253 backers pledged CA\$ 68,515 to help bring this project to life.

Funding period

Jun 20 2014 - Jul 20 2014 (30 days)

Story

*remember, you're not getting charged, unless we reach our funding goal of 30 000\$.

The future of Artificial intelligence is here. Meet **J.A.E.S.A**, a user-friendly A.I. unlike any you've seen before - for a customer-friendly price!

Main features:

- ability to naturally speak with the user on any topic using advanced logic processing
- remembering discussed information, thinking independently, learning from user and world interactions
- complete set of virtual assistant capabilities - internet search, weather forecast, alarm, call and sms answering, reminders etc. - all voice-controlled!
- integration with our **Smart House** system that will allow you to control any device, security, music and lights in your house with just your voice (or even let Jaesa handle everything herself) - even while you're away!*
- integration with our **Warden** app - with it you will achieve complete access to your mobile device and home security - including data security, remote access to cameras and electronic locks, as well as theft protection using GPS location tracking, remote control over your

device and receiving live photos and video feed of a person using the device!*

- multi-platform integration - iOS, Android and PC versions!*

* - we will implement these features right away upon reaching the following funding milestones:

Support us and, upon reaching respective funding goals, be able to:

- customize **J.A.E.S.A** voice and personality - including a male voice and personality called **HUDSON**
- easily build your own unique UI from core components and chose a style, according to your liking
- teach **J.A.E.S.A** custom voice commands for any actions and get even more communication freedom and flexibility
- grow your connection with **J.A.E.S.A** and engage in more deep and personal conversations
- get **J.A.E.S.A** for Android and PC
- integrate **J.A.E.S.A** with our innovative information security app, **Warden**! Be able to secure information on your mobile device, eliminate the threat of theft or losing your phone and have complete remote access to your home security. Read more about **Warden** here: <http://www.ainovarobotics.com/#!/project/cngp>
- integrate **J.A.E.S.A** with our **Smart House** project and control the lighting, sound, home security, home theater, computers, kitchen appliances, entertainment devices, and heating with nothing but your voice! Set your plants to be watered automatically and your pets to be fed while you are away and don't let anything to distract you from the matter at hand
- get access to **J.A.E.S.A** Application Programming Interface and complete documentation to be able to create your own AI and shape the future with your own hands

J.A.E.S.A's capabilities are far beyond your typical virtual assistant - she is your new friend and ally. Feel free to discuss anything with her - whether it is a sophisticated scientific discussion or a simple chit-chat, we did our best to make sure that she will be able to talk to you just like another human would. **J.A.E.S.A** has feelings, memory, character and ability to think independently, while remembering information and being able to analyze any kind of data. Our goal is to make **J.A.E.S.A** as close to a living being as possible!

We are using neuro-linguistic approach to programming and cutting-edge technology, such as machine learning algorithms, CRF++ and advanced AIML processing similar to A.L.I.C.E for offline communication to bring a futuristic Artificial Intelligence vision to life.

From basic voice-operated tasks like weather, messaging, and managing calendars, to complex tasks like carrying casual conversation, **J.A.E.S.A** learns from your interactions and adapts to become better and smarter every day. One of the unique features that **J.A.E.S.A** offers is not being dependent on an internet data feed - she can still converse with you and manage most your mobile device

needs even while offline. Customizable U.I. will allow you to personalize **J.A.E.S.A** and make her even more user-friendly and to your liking - unique and custom-tailored just for you.

Future plans for **J.A.E.S.A** include compatibility with **Warden**, a security platform for your mobile devices and your home, and **Smart House**, an application that offers you complete control over the utilities, appliances, and electronics in your household.

Risks and challenges

Voice recognition

Most voice and speech recognition systems require a preset collection of words or phrases that it is able to recognize. An alternative to that is a cloud-based recognition, but it is much slower and requires a stable Internet connection.

Processing

Most of more or less similar systems, such as virtual assistants for both iOS and Android, do not support natural conversation with the user. We have to develop a completely new blend of technologies using neuro-linguistic approach and conditional random fields to create complex cognitive patterns and learning algorithms.

Speech generation

Speech generation or synthesis that will produce a naturally sounding voice requires creation of sophisticated software or purchasing of expensive licenses.
