The Agreement Paradox

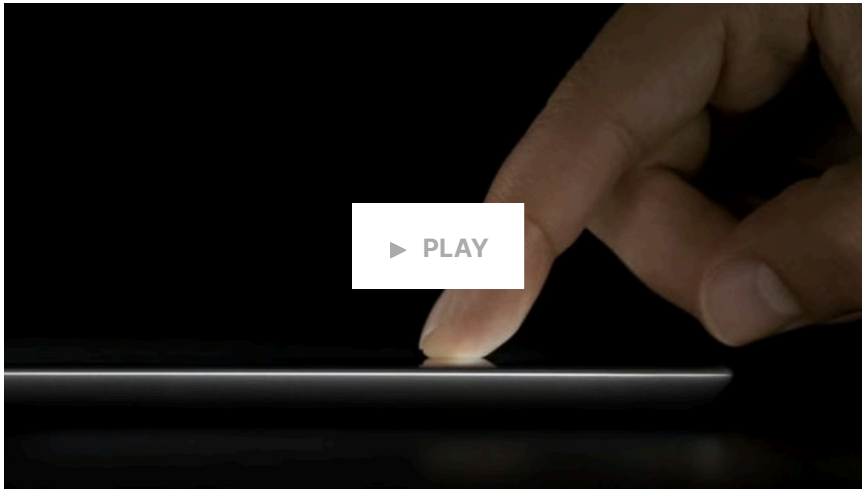

How often do you accept agreements with legally binding terms you don't actually understand? - See what we are doing about it.

Story

Taking on the last analog bastion of digital economy.

Transforming legal agreements and government acts
into smart documents capable of providing answers about their own
content and logic.

Yes, ask a question - get an answer.

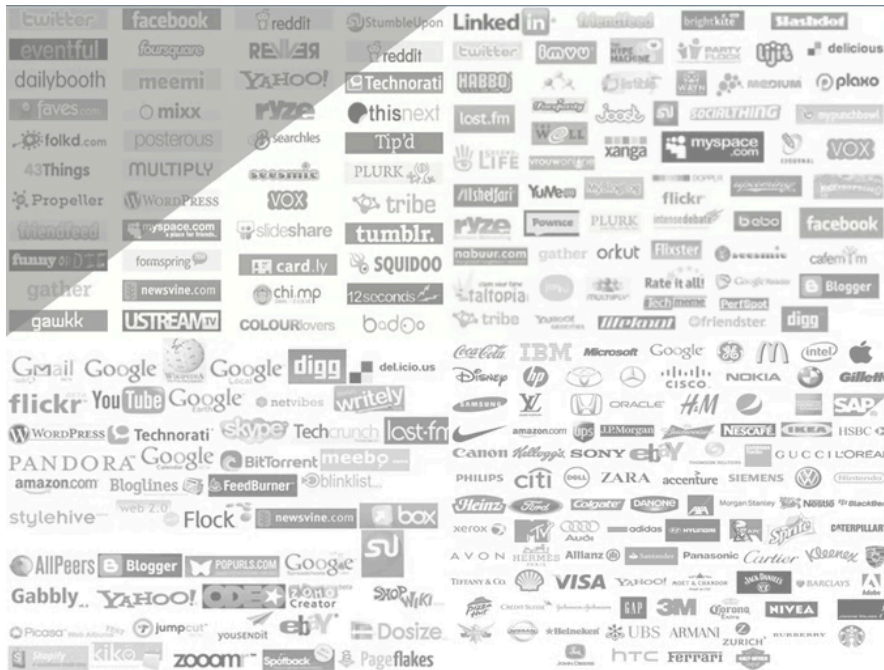

We passed another threshold. With generous backing of \$40K++, our **Market For Services** is going to happen beyond the current pilot.

Next, the final stretch! We intend to transform as many consumer brand agreements as you willing to support.

Final stretch bonus. Every backer of \$30+ will get to choose a consumer agreement or privacy policy they would like to see transformed and available for queries. If you decide to back our project, please indicate the agreement of your choice.

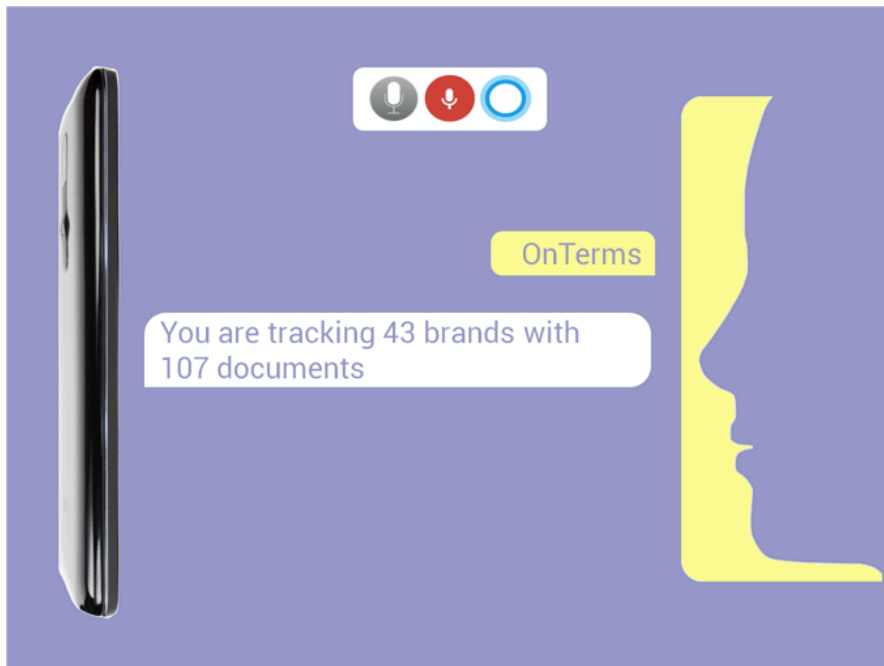

All agreement transformation efforts and funds will be channeled through our **Market For Services**. If you have ability to help interpret agreements

and polices, particularly in areas of **technology and real estate**, please let us know by sending an email to info@on-terms.com.

Please help us cover as many brands as possible.

Funding period

Mar 11 2015 - Apr 10 2015 (30 days)

Please suggest my rights!

Our Kickstarter campaign launch was a resounding success. We reached the initial funding goal within the first couple of hours, broke few Canadian records and still have 29 days to go.

To all of you who so unselfishly supported our vision, heartfelt **THANK YOU!** Now we know that first versions of our enabling technology will be delivered in July and that we have an extra month worth of tailwind to prepare.

Time to move to our extended goal: funding push for the Market for Services, beyond the current pilot. Here's the backer perspective.

You will be able to:

- apply your valuable expertise and experience - there is no shortage of consumer agreements and government acts in any vertical market or field of business;
- publish your text document, select the provider from any number of bids and contract for required transformation services;
- bid for service contracts, deliver the results and be paid;
- rate the experience.

Your service requests and bids will clearly indicate your founding entitlement. Your reputation endorsements of your contracting parties will be multiplied by your endorsement factor. Your contracting parties will know that your endorsements, either way, carry so much more weight.

You may think this is biased, and you are right.

Consumer agreements are profoundly confusing and dysfunctional! They come in many forms (a.i. Service Contracts, Terms of Use, Licenses, Privacy Policies, Consent Forms, ...). As consumers, each of us is party to hundreds of those and we are hopelessly clueless.

With advancements in technology and online commerce, we are experiencing growth in numbers and complexity of new products and services, resulting in increased complexity of required consumer agreements.

The main culprit in all of this is the paradox: 21st century **digital**, networked economy while 18th century **analog** legal agreements. In their current textual form, legal agreements are incomprehensible to consumers.

Legal agreements are essentially a set of rules, definitions and sometimes formulae regulating the behavior of participating parties. Our technology is capable of extracting the rules and transforming text-based legal frameworks into smart documents. Presented with a scenario, they will interpret their own legally binding terms and provide outcomes.

With such capability, we intend to:

- **Democratize** interpretation of consumer agreements by reducing the current complexity and automating the execution of scenarios. We are currently at the stage where such transformations (in English) are commercially viable. Over time, as our technology continues to learn from experience, transformations will become seamless. Virtually, at zero-cost.
- Provide consumers with true opportunity of **informed choice** by establishing single-glance overview (ratings and benchmarks) of individual agreements.
- Often, consumer agreements are severely biased towards the protection of vendors and their shareholders. How often do we see vendors' level-of-service guarantees? By providing consumers with informed, single-point interaction about agreements, we hope to establish a sense of **balance**. From vendor vs. isolated, ill-informed consumer to vendor vs. educated consumer base.
- Offer innovating vendors an opportunity to use their consumer agreements as **competitive advantage**.

The next phase of the project will be crowd-sourced through Kickstarter. We intend to **"use the network to solve the network's problem"**. This effort will package existing services into a

The next phase of the project will be crowd-sourced through Kickstarter. We intend to **"use the network to solve the network's problem"**. This effort will package existing services into a new web site and mobile apps.

Broad range of rewards is offered to project backers. Please review the rest of this site or visit our Kickstarter project page.

Kickstarter Primer

Kickstarter is the world-leading funding platform for creative projects.

Projects have set funding goals. Ours is \$25,000 (Canadian).

Projects are funded only if the total of backing pledges reach or surpass the goal after the funding period. All or nothing.

Once on our Kickstarter.com project page, registering a pledge is a simple matter of following the instructions. Usual information: name, email, credit card.

However, Kickstarter.com will process your pledge in two steps:

1. Initial step, just a pledge. No credit card transaction.
2. If at the end of the funding phase (30 days), project reaches its funding goal, amount of your pledge will be charged against your credit card automatically. Otherwise, no transaction will occur.

"KICKSTARTER PROJECT – SUPPORT SITE" in banner of this website is the link to our Kickstarter project.

Agreement Paradox

How often do we chose to:

- "accept", "agree to", confirm that we "carefully read and understood all legally binding terms" in ...
- contracts, license/service agreements, term of use, privacy policies, consent forms, ...
- while installing software, apps, visiting web sites, buying products or services, ...?

How much do we know about what these legally-binding-terms actually mean?

How often would these "agreements" unilaterally change with or without notice?

With advancements in technology and online commerce, we are experiencing growth in numbers and complexity of new products and services, resulting

The main culprit in all of this is the paradox: 21st century **digital**, networked economy while 18th century **analog** legal agreements.

Furthermore, Internet of Everything is upon us. If current situation is less than manageable,...

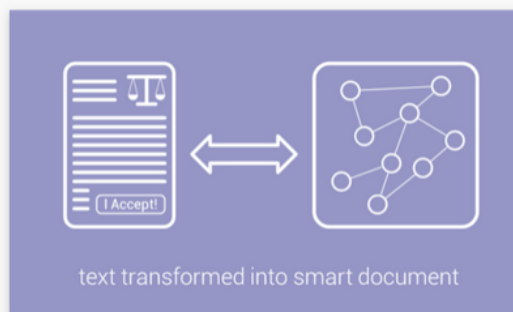

Wait until your fridge commits to legally binding terms with your grocer's delivery truck. Or, your TV set starts sending all your private conversations to an undisclosed company...

But hold on, didn't that happen already?

In our view, the root cause of the Agreement Paradox is consumer's lack of convenient access to agreement interpretation!

Opportunity Of Informed Choice

Legal agreements are essentially a set of rules, definitions and sometimes formulae regulating the behavior of participating parties. Our technology is capable of extracting the rules and transforming text-based legal frameworks into smart documents. Presented with a scenario, they will interpret their own legally binding terms.

Market For Services

The body of existing consumer agreements is vast, spanning virtually all vertical markets and growing fast. For quite a while, our rule transformation process will require services in area on text annotation, interpretation, testing, etc.

In support of these efforts, we are enabling a formal market for services for any type of business expertise or experience. It facilitates the full relationship life cycle of services requestor and service provider. From the process of discovery to payment and rating.

For these features alone, our market is no different from others

However, ours offers something very unique.

But first, the question:

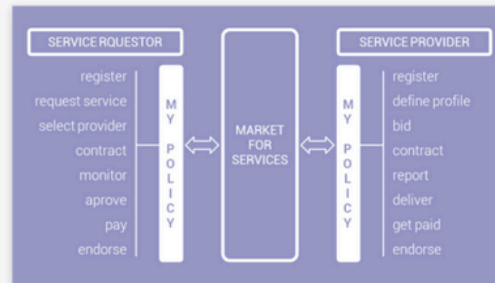

Ever wondered, how come we have a number of hugely successful markets for products like Amazon, eBay and Alibaba, while not a single equivalent in markets for services?

The answer is very simple. Markets for **products** sell products as commodities, primarily differentiated by price. Sold using the same process for all products in category.

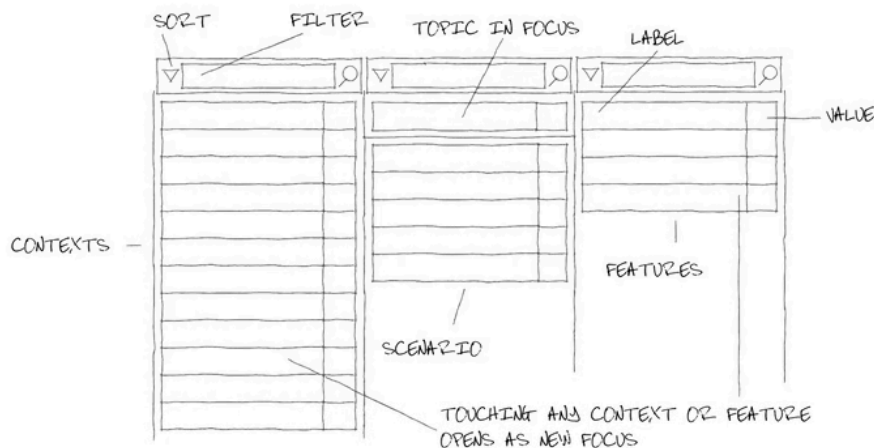

The last thing **services** providers want is to be treated as commodity. As it is, they are desperately trying to differentiate with quality, commitment, customer service. And all of this documented in their service policies. So, all of these policies are deliberately unique.

Remember? We can execute policies from text. We can facilitate requestors' and providers' participation in our market using their own policies. So, for as long as you can define your policy in text, we can allow you to compete **on your own terms** (pun intended).

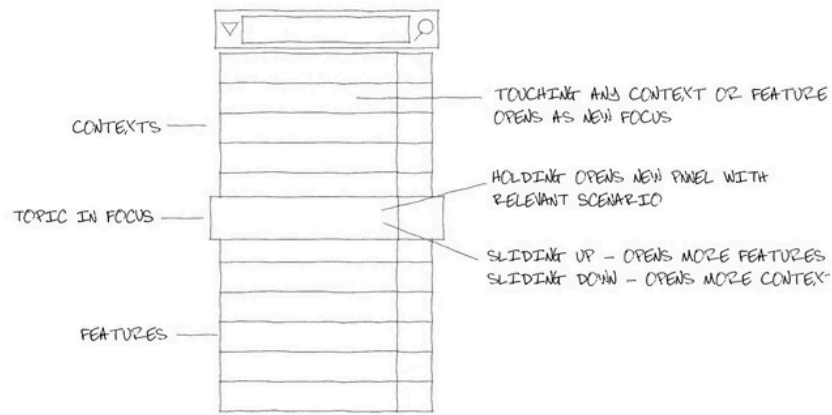

We thrive on differentiation.

New user interface design sketches.

Larger screen or landscape orientation.

Smartphone portrait orientation.

Proposed Project

SCOPE - Develop first versions of the web site and smartphone apps.

Key features include:

- ability to select a desired smart document
- request a scenario by focusing either on the entire document, or an individual topic
- define variables and execute the scenario
- post comment regarding the scenario outcome
- endorse particular comments

TIME TO DELIVERABLES - Three months for initial beta, four months to deployment. If financing phase closes by end of April, July for early beta, August/September for deployment.

FUNDING GOAL - \$25,000(Cad).

FUNDING PROJECT COMMENCEMENT - Tuesday, March 10 - 7:00PM EST.

EXTENDED GOALS (>\$25k) - Subject to actual backings of over \$25K, we will schedule the development and delivery of additional projects:

- consumer agreements rating engine
- document transformation toolbox
- market for services (beyond current pilot)
- service scalability

Otherwise, these projects will be funded either in another effort through Kickstarter, or through different sources.

Early Releases of New Products

As soon as new versions of products are stable enough to be tested outside of labs, they will gradually be released to qualified backers.

Candidate backers will be prioritized by:

- their willingness to participate in the program,
- backing amount and
- time of backing.

Kickstarter's Terms of Use (Smart Document)

As proof of concept, we have transformed Kickstarter's own Term of Use. Immediately upon project's successful funding, qualified backers will be able to query the smart document by presenting different scenarios using email as a communication conduit.

New Transformed Agreements

Approximately 10% of project backing amount will be allocated for effort in additional consumer agreement transformations. Candidate agreements will be selected by backers through a voting process factored by individual backing amount.

Access to Market for Services

Immediately upon project's successful funding, qualified backers will be able to participate in a pilot of the market for services. Using template policies, backers will be able to execute policy events and observe the effects using email as a communication conduit. In addition, qualified backers will be able to modify the policy and conceivably create one matching their own needs.

While in pilot mode, we intend to engage the market for all our needs in areas of agreement transformations and customer service.

Premium Personal Account

Access to new web site and apps will be free, supported by adds. in addition to personalized features, premium personal account holders will have adds-free access to web site and apps. Projected value: \$75 per year.

Professional License

This is all the licensing you will ever need, if you wanted to participate in the market for services. You will be able to offer or request services, build, manage and offer your own intellectual property. Projected value: \$300 per year.

Business Account

This is a perpetual license covering the scope of transformations as part of your project backing. You will be able to manage a proprietary platform of smart documents and accounts. Projected value: \$500 per year.

1,000-word Transformation

Proprietary transformation of a 1,000-word agreement, license, policy, etc. Delivered as your intellectual property in context of your business account. Projected value: \$500

Interim Execution Platform

While project is the development phase, backers with proprietary transformations will have access to our current platform. Like in our demo, backers will be able to query transformed agreements. Licenses for Interim Execution Platform will be valid until new platform becomes available.

5,000-word Transformation

Proprietary transformation of a 5,000-word agreement, license, policy, etc. Delivered as your intellectual property in context of your business account. Projected value: \$1,500 (\$500 for first 1,000 words, \$250 per 1,000 words subsequently).

Founding Entitlements

Based on the backing amount and subsequent to backer's approval, backer's network profile as well as all network messages from backers will be tagged with the appropriate founding entitlement (i.e. Funding Sponsor, Founding Member, Founding Partner or Founder). For example: Message From John Doe [Founding Partner].

Endorsement Factor

Universal factor that will be applied to all your endorsements, votes, etc. based on your Founding Entitlement (i.e. Founding Sponsor: 2; Founding Member: 4; Founding Partner: 8; Founder: 16). Every time you endorse or vote, your influence would mean so much more.

For example, say you just completed a service assignment through our Market for Services. Say, you appreciated the experience and would like to endorse the vendor. Your actual endorsement will be multiplied by your Endorsement Factor. From the market's and vendor's point of view, it would appear as if the vendor was endorsed as many times.

Projected Value

Represents current value of all monetized reward components, like licenses and services. Note: We expect current transformation price to remain at the same level for about one year. After that, we project gradual reduction in cost due to ongoing improvements in our pattern recognition algorithms.

Risks and challenges

So goes the saying: "Paper can take anything!", and consumer agreements do. Not all agreements are logically sound and may not translate into logically consistent structures. In such cases, we intend to work with vendors towards resolution, case by case.

Legally binding terms may not have single interpretation. Different experts may interpret same terms in a different way. This is why we have courts. A significant feature of our technology is ability to introduce a new variable and, when needed, offer a choice of interpretation.

Scalability! Supporting a network of millions is a fundamentally different challenge of supporting a network of thousands. We have already touched upon this issue in a "Scenario If Project Overfunded". However, if it turns out that number of backers approach the limits of our technology, scalability will be addressed with high priority.
