Story

Kora: The World's First AI Assistant for Busy Families.

Funding period

Oct 21 2025 - Nov 20 2025 (30 days)

“ Stop Managing Chaos. Start Living Your Life.”

Does This Sound Familiar?

Life is messy. School pickups, hockey practice, meal planning, dentist appointments, and a thousand tiny reminders. **You're the CEO of your household**, but your tools are scattered across apps, texts, and sticky notes.

In fact, **the average family spends 8–12 hours every week just coordinating** all of this — time that could be better spent together.

Mental Overload

Juggling everyone's schedules in your head leads to missed appointments, last-minute changes, and being double-booked... again.

The Impossible Juggle

Trying to cook dinner while on a work call and planning tomorrow's meals. It's a daily recipe for stress and burnout.

The Outdated System

The family whiteboard or paper calendar is a museum of outdated plans. It's instantly wrong the moment a schedule changes.

We knew there had to be a better way.
That's why we built Kora.

Meet **Kora**, Your Family's Shared Brain

Reimagining Family Organization with The Power Of AI

All-in-one view of
your digital
calendars

Chores &
shopping lists

Individual profiles
for everyone

Companion app
controls everythin

Voice-first
conversational AI

AI camera video
understanding

Control all your
smart home
devices

Display your
photos and art

Shared Visual Calendar

Visually track your entire family's schedule from multiple calendar services on one beautiful, easy-to-read dashboard.

Kora seamlessly syncs with all the platforms your family relies on—Google Calendar, Outlook, Apple Calendar, Cozi, TeamSnap, and many more.

Habit-Forming **Chore System**

Go beyond simple checklists with a gamified system that uses progression and rewards to build lasting habits for you and your kids.

Build Streaks, Earn Points

Set Goals, Unlock Real Rewards

View Progress, Foster Pride

Companion **Mobile App**

Stay in control from anywhere with a powerful app to manage events, check chore progress, and interact with your Kora on the go.

Risks and challenges

Building a category-defining product like Kora—a wall-mounted AI assistant designed specifically for busy families—comes with real challenges.

1. Hardware Production Risks

Manufacturing custom electronics at scale involves potential delays in sourcing components, quality control, and logistics—especially as global supply chains remain unpredictable.

How we're mitigating it: We've already secured a trusted hardware manufacturing partner and built working prototypes. We're planning small-batch production first to identify and resolve issues early.

2. Software Complexity

Kora isn't just a digital calendar—it's powered by conversational AI and agentic automation. Building and refining those intelligent experiences to feel magical and reliable will take time.

How we're mitigating it: Our founding team has deep experience in AI and product development. We're building core features first (calendar,

reminders, chores, photo frame) and releasing advanced agents in stages.

3. Fulfillment Delays

Shipping large tech products like Kora globally can run into unexpected delays—from customs to packaging issues.

How we're mitigating it: We're partnering with logistics experts and will keep backers updated with full transparency on timelines and milestones.

4. Evolving Feature Scope

Some advanced features (like multi-language support, travel concierge, or smart grocery agents) are on our roadmap but may evolve based on user feedback.

How we're mitigating it: We'll share a clear development timeline and involve our backers in shaping future releases.

Use of AI

My project seeks funding for AI technology.

- ✓ The owners of these works are or will be receiving credit for their work.
- ✓ For the database or source that I will use or will create, the consent of the persons whose works or information incorporated have been obtained.
- ✓ There is or will be an opt-in or opt-out for those owners.

I am incorporating AI in my project in another way.

Project description / how AI is used Our campaign is raising funds to manufacture Kora AI, a wall-mounted home assistant that runs on-device, agentic AI models to help families coordinate schedules, reminders, shopping lists, and smart-home automations. We are developing the AI technology that powers Kora (natural-language understanding, task-planning, and personalized reminder engines). Data sources + consent

Training data comes from a mix of publicly available, open-license datasets and proprietary data we create in-house. No copyrighted works or personal data are used without explicit, prior consent. All future user data remain local to the device by default; users must opt-in before any data leaves the home for model improvement. Every data source we license or create is documented; owners/creators will receive credit in our user guide and on our website. We provide a straightforward opt-in / opt-out mechanism for any third-party rights-holders whose material could be incorporated. No AI-generated creative works in the final product Kora's AI is functional (task planning, reminders, speech recognition). We are not distributing AI-generated art, music, or text as part of the deliverable goods, nor are we training on user-generated creative works. Why funding is needed Kickstarter funds will cover: Hardware tooling and first manufacturing run. Continued R&D for on-device agentic AI (privacy-preserving optimization, latency reduction, accessibility features). Open-source compliance reviews and third-party license fees.
