Story

FaceTheCamera — The AI Teleprompter for Business Communication

Funding period

Dec 4 2025 - Jan 13 2026 (40 days)

Speaking clearly and naturally on camera is difficult — especially when the message matters.

Whether you're ***pitching investors, leading a team, selling to clients, recruiting talent, or building your personal brand***, talking on video has become a core part of professional communication.

FaceTheCamera helps ***founders, executives, sales teams, marketers, recruiters, and content professionals*** deliver clear, confident, and credible on-camera messages — without memorizing lines or sounding scripted. Use it for the **full spectrum of business communication**:

- Investor & fundraising pitches
- CEO updates & C-level communication
- Sales outreach & client presentations
- Marketing explainers & product demos
- Recruiting messages & employer branding
- Internal training & team updates
- Personal branding content

With script reading, real-time AI eye-contact correction, and a suite of supporting features, you can present naturally and deliver polished, professional video messages every time.

And as 2026 approaches, there's no better moment to strengthen your on-camera presence and elevate your business communication for the

year ahead.

⚠ The Problems for Business Professionals

Recording a business video—whether it's an investor pitch, client update, or internal announcement—should be simple. In reality, most professionals find it **stressful, awkward, and time-consuming**.

! Challenge 1: Losing structure and clarity mid-message

Without a clear script flow, it's easy to ramble, repeat yourself, suddenly blank out, or skip important points that matter to investors, clients, or your team.

! Challenge 2: Obvious eye movement when reading from a screen

Reading from notes or a basic teleprompter makes your eyes shift unnaturally, breaking trust and making it clear you're just "reading a script."

! Challenge 3: Filler words and unpolished delivery

Under pressure, many people rely on "uh," "um," and long pauses, which makes even strong ideas sound less professional and less confident.

! Challenge 4: Speaking too fast, too slow, or over time

Without a guided script pace, a "60-second pitch" easily turns into 90 seconds or more, making the message less sharp and harder to watch.

! Challenge 5: Missing or under-emphasizing key points

Important numbers, proof points, and takeaways often get buried in the middle of the message instead of being clearly highlighted.

! Challenge 6: Tense facial expressions on camera

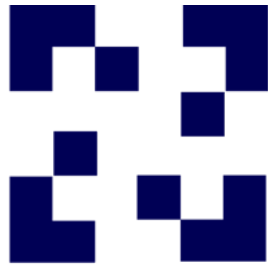

Nervousness shows up as stiffness, tight smiles, and strained expressions, which can make you look less calm, confident, and approachable than you really are.

These problems directly weaken how investors, clients, and colleagues perceive your credibility, clarity, and leadership on camera.

⚡ Solution — How FaceTheCamera Solves These Problems

FACE THE CAMERA

FaceTheCamera brings together **six** AI-driven tools designed specifically for business communication, helping you look confident, credible, and natural on camera — even if you're not a trained presenter.

 **Solution 1: Teleprompter — Deliver Clear, Structured Business Messages**

FaceTheCamera lets you present confidently without memorizing lines. Scripts flow naturally on-screen, helping you stay concise, organized, and on-message — ideal for investor pitches, executive updates, client communication, and internal presentations.

Solution 2: Eye Contact AI — Build Trust Through a Steady, Direct Gaze

Our AI keeps your eyes focused directly toward the camera, even while reading your script. This creates a natural, steady gaze that strengthens credibility and leadership presence in any high-stakes business video.

Solution 3: FluentVoice — Speak Clearly and Professionally

FaceTheCamera automatically reduces filler words like “uh” and “um,” smooths hesitations, and stabilizes your delivery. The result: a polished, confident sound that enhances client-facing communication and leadership announcements.

Solution 4: PaceControl — Maintain the Perfect Speaking Speed

Set your ideal video length — 60 seconds, 90 seconds, or more — and the teleprompter guides your pace. This ensures your message fits the exact time window you need, keeping your pitch clear, sharp, and easy to watch.

Solution 5: KeyPoint Highlights — Subtle Prompts for Stronger Delivery

AI identifies critical phrases in your script and subtly highlights them while you speak. This helps you emphasize the most important points naturally, without breaking your flow or sounding scripted.

Solution 6: Expression Ease — Present with Confidence and Approachability

AI softens tense facial expressions and stabilizes micro-movements, helping you appear relaxed, calm, and trustworthy. Ideal for leadership messages, investor communication, and any client-facing presentation where confidence matters.

Make 2026 the year you communicate with clarity, confidence, and impact — every time you press record.

☀ Who Is This For?

FaceTheCamera is built for professionals who rely on video to communicate clearly and confidently at work. It serves six major groups:

👤 🚀 Founders & Entrepreneurs

For investor pitches, fundraising updates, product announcements, and strategy messages.

👤 👤 👤 Executives & C-level leaders

For company communication, CEO announcements, all-hands updates, and leadership messages.

👤 🎯 Sales Professionals

For outreach videos, follow-ups, demo explanations, and client presentations.

👤 📣 Marketing Professionals

For brand videos, product showcases, campaign intros, and feature explainers.

👤 🧩 HR & Recruiters

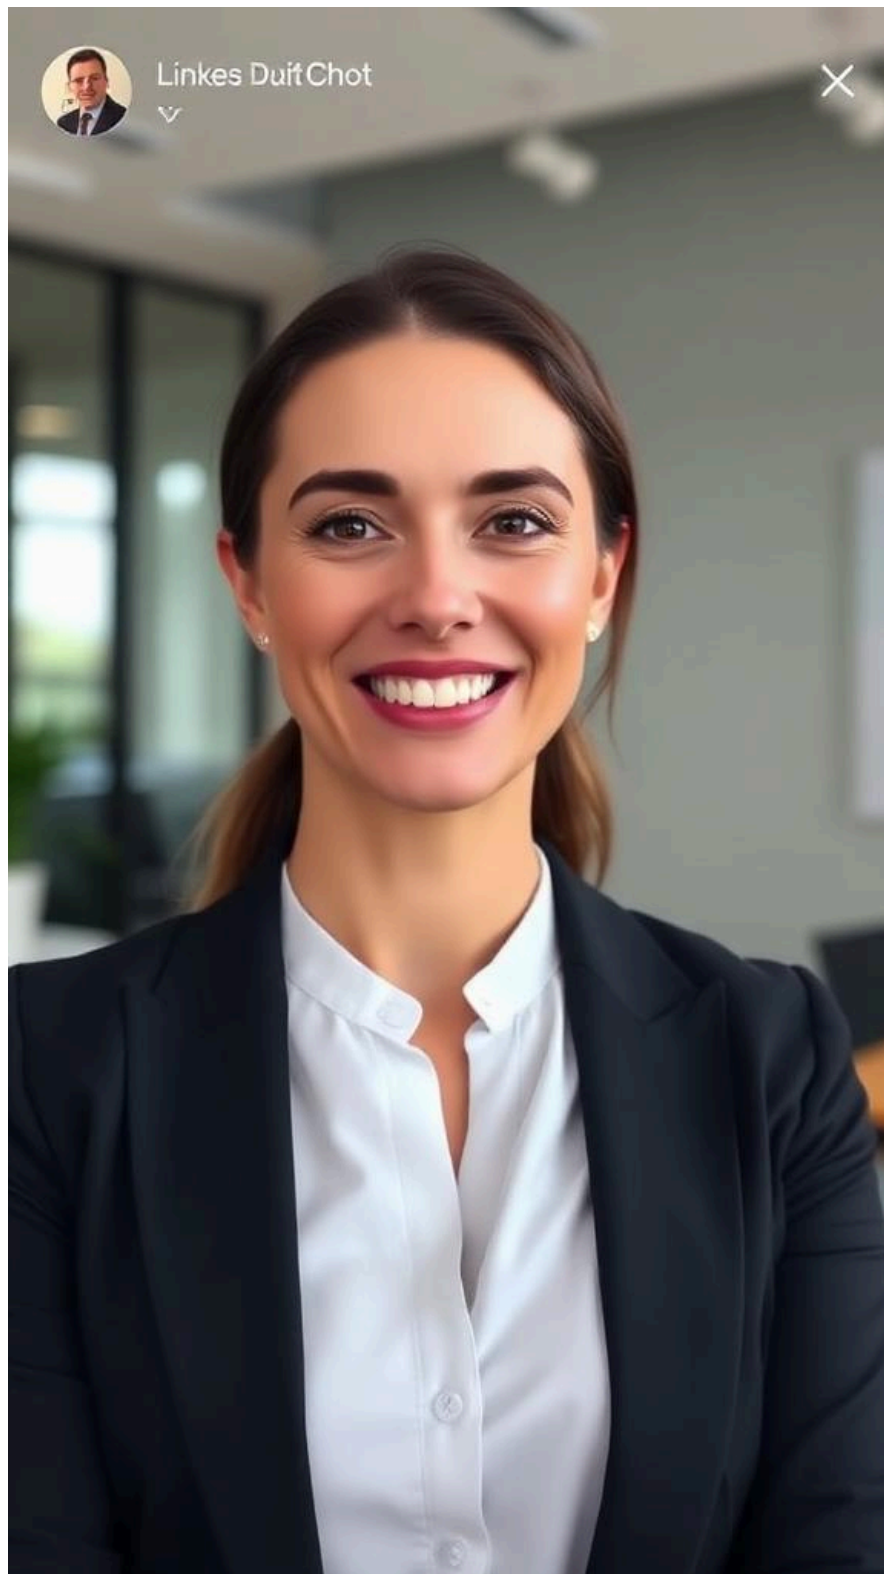

For recruiting messages, role introductions, employer branding, and onboarding videos.

👤 💡 Coaches, Consultants & Content Creators

For personal branding videos, educational content, social clips, and thought-leadership messages.

If your on-camera communication looks good, your professional reputation looks good...

The app is currently in development, with internal testing on iOS and Android underway. We're raising funds to accelerate its release, reach more users, and make confident on-camera communication accessible to everyone.

Progress So Far

- ✅ **Core features prototyped and functional** — including Teleprompter, Eye Contact AI, FluentVoice, PaceControl, KeyPoint Highlights, and Expression Ease
- ✅ **iOS & Android apps in active development**, targeting official launch in late February 2026
- ✅ **Early user testing shows strong demand** — users report improved

confidence, fluency, and natural presence on camera

✓ **Scalable product foundation in place** — solid UX direction, flexible

AI architecture, and a clear roadmap for multi-language and desktop versions

Exclusive Kickstarter Rewards

🔥 **\$149 — Lifetime License (Kickstarter Exclusive)**

One-time payment. No subscription, no renewals, no future fees.

Regular price: \$14.95/month

10-year cost: \$1,794

Your cost today: 🔥 **\$149 total**

Total savings: **\$1,645**

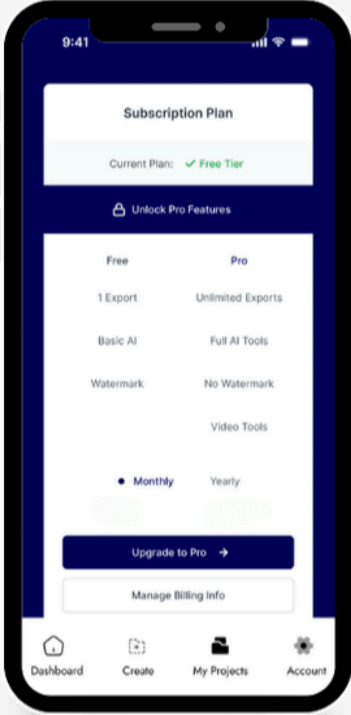

This lifetime deal is **only available during Kickstarter** and will not return after launch.

Exclusive Rewards For Backers

Reward 2
2-year access
for just **\$69**

Reward 4
Lifetime access
for just **\$149**

Reward 6
3 Lifetime access
for just **\$399**

Reward 1
1-year access
for just **\$39**

Reward 3
3-year access
for just **\$99**

Reward 5
2 Lifetime access
for just **\$289**

And More Options for Teams of 4, 5, 7, and 10

★ Rewards Summary ★

- **\$39 – One Year Access**
Full access to all premium features for 12 months.
- **\$69 – Two Year Access**
Two full years of uninterrupted access.
- **\$99 – Three Year Access**
Three years of premium access at the lowest yearly cost.
- **🔥🔥🔥 \$149 – Lifetime Membership**
Pay once, get lifetime access for one member. All features, forever. Available only during crowdfunding.
- **🔥 \$289 – Lifetime Membership (2 Members)**
Lifetime access for two members. A one-time purchase for co-founders or partners. Available only during crowdfunding.
- **\$399 – Lifetime Membership (3 Members)**
Lifetime access for three members. Ideal for co-founding trios or early startup teams. Available only during crowdfunding.

- **\$499 – Lifetime Membership (4 Members)**

Lifetime access for four members. Great for small startup teams or tightly collaborating creative/sales groups. Available only during crowdfunding.

- **\$595 – Lifetime Membership (5 Members)**

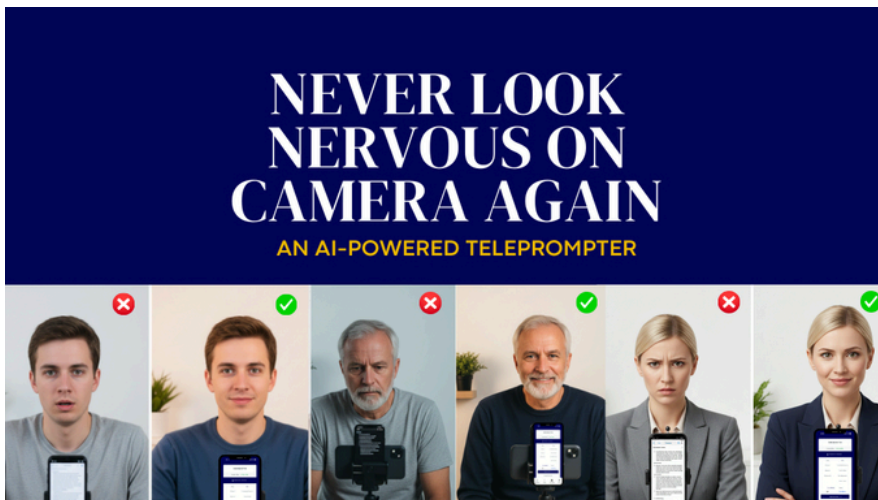

Lifetime access for five members. Designed for growing teams creating pitches, demos, and updates together. Available only during crowdfunding.

- **\$769 – Lifetime Membership (7 Members)**

Lifetime access for seven members. Built for expanding, cross-functional teams producing video content at scale. Available only during crowdfunding.

- **🔥 \$999 – Company Lifetime Membership (10 Members)**

Lifetime access for ten members. The best choice for companies investing in long-term on-camera communication and professional development.

♥ Why Support This Project

FaceTheCamera exists for one purpose: **to help professionals communicate clearly, confidently, and persuasively on camera.**

Today, video has become the default way to **pitch, sell, lead, teach, recruit, and build** your personal brand. But most people still struggle with delivery — long retakes, forgotten lines, stiff presence, wandering eyes, and unclear messages.

FaceTheCamera is built to fix that. It helps you:

- Deliver stronger investor, sales, and leadership messages
- Look polished and professional without memorizing lines
- Reduce retakes and save hours of recording time

- Increase clarity, confidence, and trust in every video
- Build your professional reputation faster

If video plays any role in your career — pitching, selling, leading, teaching, or branding — this tool pays for itself the moment you start using it.

Your message matters. Make it shine in 2026.

Stretch Goals & Future Vision (Business Edition)

Your support helps us finalize FaceTheCamera for launch and gives early backers permanent access with no monthly fees. Stretch goals allow us to expand the platform and unlock more tools for business communication.

1. Multi-Language Teleprompter & AI Support

We plan to add support for multiple languages, enabling professionals to record in their native language while maintaining natural eye contact, clear pacing, and strong delivery.

2. Desktop Version (Mac & Windows)

The desktop app will include a virtual camera that works inside Zoom, Google Meet, Microsoft Teams, and other video-conferencing platforms. This brings all FaceTheCamera features—Teleprompter, Eye Contact AI, PaceControl, and KeyPoint Highlights —directly into **live meetings, client presentations, investor calls, and webinars.**

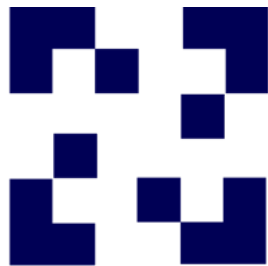

3. AI-Enhanced Content Tools

As stretch goals unlock, we will introduce a set of AI tools designed specifically for business communication. Unlike creator-focused video tools, FaceTheCamera is built for professionals who need clarity, credibility, and polish in formal, high-stakes contexts.

Our upcoming enhancements include automatic captioning with clean, accurate subtitles; smart formatting for professional platforms such as LinkedIn and YouTube; intelligent background cleanup with subtle visual refinement; and one-click adjustments that elevate executive presence. These tools help business users create clear, polished, platform-ready videos quickly—without compromising professionalism.

Our Long-Term Vision

FaceTheCamera begins as an AI teleprompter, but our goal is to build a complete AI communication assistant for business professionals—helping you speak with confidence, deliver clear messages, strengthen your leadership presence, and build your personal brand faster. We aim to evolve from a teleprompter into a full AI video-creation partner for anyone who communicates on camera.

FACE THE CAMERA

Who We Are

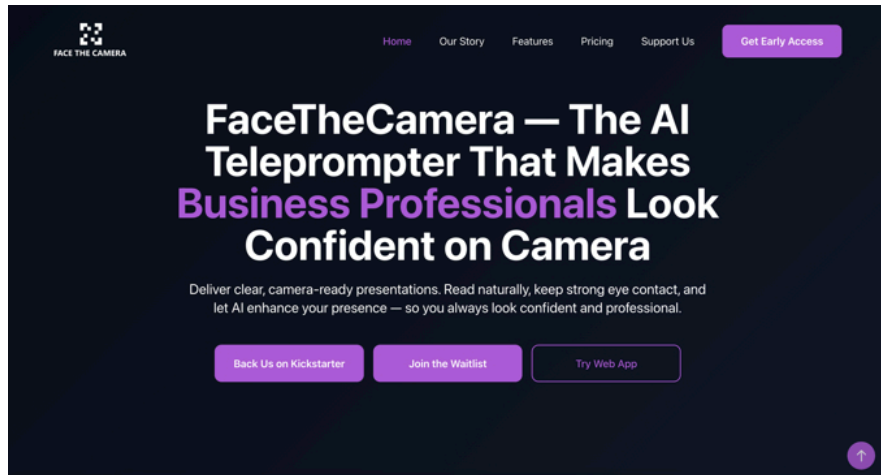

We're a small team led by **Rundong Li, a Canadian entrepreneur**, working alongside creators, engineers, and product builders who understand the pressure of speaking on camera—whether pitching investors, teaching online, leading teams, or producing content. Forgotten lines, lost eye contact, and on-camera anxiety are challenges we've experienced ourselves.

FaceTheCamera is the tool we always wished existed: an AI-powered teleprompter designed to help professionals appear natural, confident,

and ready to communicate.

With your help, we can make sure people from all walks of life can share their message with clarity, trust, and authenticity.

Risks and challenges

Bringing an AI-powered tool like FaceTheCamera to life is complex — but we're up for the challenge. Here's what we're watching closely, and how we're addressing it with care, clarity, and professionalism:

1. AI Performance in the Real World

Core features like the teleprompter, eye contact stabilization, FluentVoice, SyncFix, and expression relaxation are already functional in prototypes. The real challenge is refining them under diverse real-world conditions: different accents, facial features, lighting environments, and recording setups. We've built flexibility into our timeline and will launch in phases, guided by real user feedback.

2. Cross-Platform Rollout

We're targeting iOS first, with Android and desktop versions scheduled to follow.

This staged approach allows us to focus on stability and polish on one platform before scaling. Our official launch milestone is set for Feb 25, 2026, and additional platforms will follow soon after.

3. User Feedback & Feature Tuning

We expect early adopters to uncover edge cases that our team may not anticipate.

That's why backers will be an essential part of our development loop. Your input will directly shape how FaceTheCamera evolves — not just at launch, but far beyond.

4. Data Privacy & Trust

We never store your video or personal data. All analysis happens locally or securely in transit.

Privacy isn't just a feature — it's been a design principle from day one. As AI adoption grows, we believe trust and transparency are essential foundations.

5. Timelines & Technical Uncertainty

Our team has deep experience in AI, UX, and mobile apps, which gives us a head start.

Still, no project is without surprises — whether technical hurdles or timeline shifts.

If delays arise, we'll communicate early, often, and honestly.

6. Transparency & Accountability

Delays, pivots, tough calls — we'll face them with openness. You'll always hear from us first, and we'll handle everything with fairness and integrity.

♥ Our Commitment

We're not chasing hype — we're solving a real problem. FaceTheCamera is for anyone who's ever felt nervous hitting record. With your support, we're not just funding an app — we're building a movement of confident, authentic communication.

[Learn about accountability on Kickstarter](#)

Use of AI

FaceTheCamera is a human-designed app that helps people look confident and natural on camera. Our team created all product concepts, UX flows, and interface designs manually. We use AI and open-source technologies only to enhance video quality and user experience — never to generate creative content or marketing materials.

AI and Open-Source Components Used in the Product

Teleprompter Integration: The teleprompter system is built using integrated open-source React teleprompter components. Our team customized the interface, scrolling behavior, and overlay controls to ensure smooth reading and on-screen usability. This module does not rely on AI — it is powered entirely by standard front-end technology.

Smart Eye Contact & Head Stabilization: To help users maintain natural eye contact and camera presence, we use Microsoft Azure Video APIs and NVIDIA Maxine for real-time face tracking and head stabilization. These AI tools analyze visual data to subtly stabilize gaze and head movement. They do not replace, alter, or generate any part of the user's face or expressions.

FluentVoice (Filler Word Removal): This module uses the OpenAI Realtime API and Whisper Flow for real-time speech recognition and cleanup. AI detects filler words such as "um" or "uh" and regenerates smoother audio based on the user's original voice recording. The output remains 100% human — AI functions only as a clarity and fluency filter.

Expression Relaxation AI: Powered by NVIDIA Maxine, this optional feature gently reduces facial tension (e.g., nervous blinking or stiffness) to help users appear calm and confident. Adjustments are subtle and occur in real time; the system never generates or replaces faces.

AI Use in Marketing or Creative Materials: All UI/UX visuals, product screenshots, and written copy were created by our team. The campaign video includes licensed stock footage from public libraries; while we did not generate these clips ourselves, some may have been originally produced with AI tools. The voice-over narration was created using AI text-to-speech solely for demonstration purposes. No AI was used to create or modify human likenesses in the video.

Human Contribution: All app concepts, UX/UI designs, feature logic, and system integrations were designed, coded, and tested by our team. AI and open-source tools are used purely as technical aids to

improve the user experience — never as substitutes for human creativity.

Long-lasting design

FaceTheCamera is designed to grow with its users — starting as an AI-powered teleprompter that builds lasting confidence, and evolving with new features over time. We are focused on thoughtful UX, a scalable AI foundation, and regular updates so the app remains relevant, reliable, and valuable for years to come.
