Story

UserKeeper – You Are Never Alone

Staying safe and connected shouldn't depend entirely on perfect internet conditions. In real life, people lose signal, miss alerts, or can't reach their loved ones in critical situations.

Funding period

Mar 27 2026 - Apr 26 2026 (30 days)

What We're Building

UserKeeper is a mobile safety app that helps people stay connected and respond quickly in emergency situations.

The app allows users to:

Share their location with trusted contacts

Send emergency alerts instantly

Receive notifications when something is wrong

Stay connected even in low-connectivity environments

Current Status (IMPORTANT для модерации)

We have already designed the core user experience and built early interface prototypes.

The current version includes:

Basic UI screens (map, alerts, contacts)

Early interaction flows for emergency alerts

Initial testing of location sharing logic

What's Next (Roadmap)

With your support, we plan to move forward with development:

April 2026 – Finalize prototype and core features

May 2026 – Closed beta testing with early backers

June 2026 – Public beta release

July 2026 – Full launch and ongoing improvements

How It Works

UserKeeper is designed to work reliably by combining standard mobile technologies with alternative communication approaches in low-connectivity environments.

Our goal is to ensure that important alerts and location data can still reach trusted contacts even when network conditions are unstable.

Why This Matters

We believe no one should feel alone in critical moments.

UserKeeper is built to give people peace of mind and a simple way to stay connected when it matters most.

How We'll Use the Funds

Your support will help us:

Complete app development

Improve reliability and testing

Build secure infrastructure

Launch and maintain the platform

Prototype Demo (Version 0.2)

Below is a demo of the current UserKeeper prototype (version 0.2). It demonstrates the core functionality that has already been designed and

partially implemented.

What's Already Implemented

Emergency SOS & Communication

One-tap SOS sends precise GPS location to trusted contacts

Medical profile is automatically attached (blood type, allergies, conditions, medications)

Three SOS types: medical, general, and silent alert

In-app chat within an active SOS session

Notifications sent to nearby users within a 10 km radius

Medical Profile

Created during registration and editable anytime

Includes blood type, allergies, chronic conditions, and medications

Instantly accessible during any emergency

Specialist Verification

Medical workers, police, and rescuers can submit ID for verification

Verified users receive a badge and priority alerts

Roles & Status System

Roles include: medic, police, rescuer, volunteer, parent, child, and regular user

Users under 18 are automatically assigned child status

Each role unlocks specific features

Hiking Mode

Activated before starting a route

Automatic GPS checkpoints every 10–90 minutes

Route data is securely stored and can be shared after completion

Parental Control

Parents can track children in real time

Children can send SOS directly to parents

Easy connection via Telegram username

Events System

Specialists and volunteers can create events

Event types: missing person search, emergency, volunteer activity

Includes location, time, details, and images

Users can join and communicate within event chats

Active events appear on the map

Live Map

Real-time user location

Nearby hospitals and police stations

Active events and nearby contacts

Nearby Alerts

Notifications for events within a 10 km radius

Can be enabled or disabled in settings

Regional Support

Covers all regions and cities in Georgia

Filtering available for events and locations

Settings & Profile

GPS tracking and notifications

Emergency settings and preferences

Profile and medical data editing

Language selection

Localization

Fully available in 4 languages:

English, Russian, Ukrainian, and Georgian

Try the Prototype

Risks and challenges

Risks and Challenges

Every project has challenges, and we want to be transparent with our backers.

1. Technical Development

- Risk: Building a secure, decentralized app with offline capabilities is complex.
- Our Plan: We have an experienced team in app development, blockchain, and AI. We have already built prototypes and tested core features. We will follow a clear roadmap and iterative testing to ensure functionality.

2. Scaling & Server Reliability

- Risk: Ensuring the app works reliably for a growing number of users.
- Our Plan: We are implementing mesh networking and cloud-based backup systems. Early backers will help us test scalability before public launch.

3. User Adoption & Education

- Risk: Users may need guidance to use advanced features like offline tracking and secure alerts.
- Our Plan: We will provide clear tutorials, onboarding flows, and customer support to ensure everyone can use the app easily.

4. Regulatory & Privacy Considerations

- Risk: Location-based apps must comply with privacy laws in different regions.
- Our Plan: We built UserKeeper with privacy-first principles. All data is encrypted and decentralized, and we will consult legal experts to ensure compliance.

Our Commitment:

We are fully committed to delivering a safe, reliable, and innovative UserKeeper app. By backing this project, you are helping us test, improve, and launch a product that will make safety accessible to everyone.

Use of AI

UserKeeper incorporates AI to enhance user safety. AI analyzes location data in real time and generates smart alerts and recommendations for users. This helps the app respond quickly to potential safety risks while keeping all data secure and private. All app development, design, and core functionality is created by our human team. AI is used only as a tool to improve user experience.
