Story

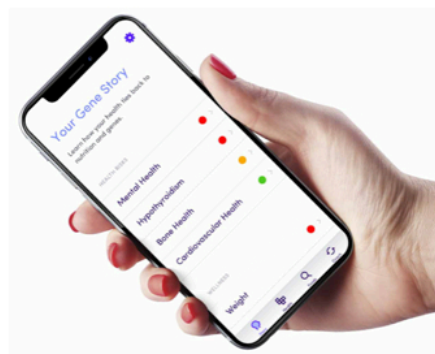

gini

The world's most advanced DNA based health & nutrition assistant is about to get smarter...

But we need your help!

This is **one of the best health apps** I have downloaded. It has helped me immensely. Thank you Gini! ❤️

- Rose

Your Diet & Lifestyle Can Have a Huge Impact on Your Genetic Disease Risk!

Do you or your family have a history of diabetes, heart disease, weight management issues, depression, osteoporosis or other chronic illnesses? There is a high probability that you have inherited some of these conditions.

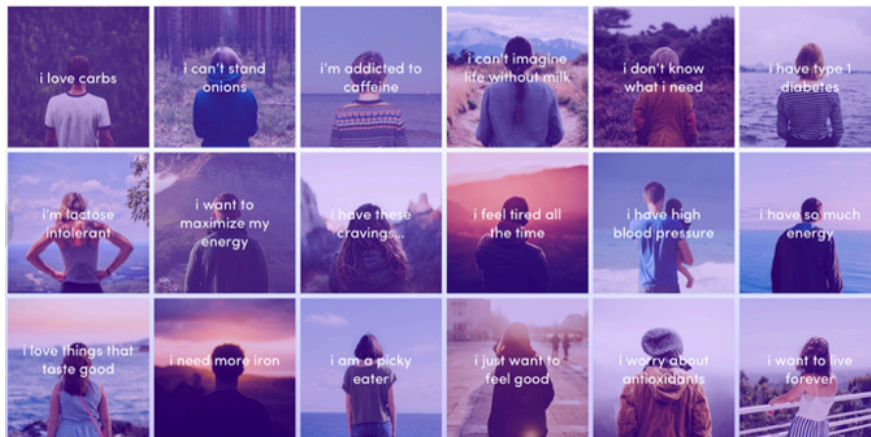

So can you change your genetic destiny?

The answer is **YES!**

With the right nutrition and lifestyle, chronic diseases can be prevented, and we'll show you how.

What's the right diet for you?

How do you know if what you've been eating is the best diet for you? Have you ever wondered why diets such as keto, mediterranean, vegan, Atkins and others, don't work for everyone?

It's because all of us have unique needs.

Every individual is genetically and biochemically unique. It essentially means that nutrition and diet should be personalized on an individual basis.

The typical recommended dietary allowance (RDA) is to avoid deficiency in an average person and not for optimal nutrition. We offer you a better and personalised approach based on nutrigenomics.

Healthcare focus
is on finding cure
vs prevention

Many chronic
diseases are
caused by diets

3 core
issues

Everyone's
nutritional needs
are different

Say hello to gini. Your personal lifestyle coach.

Food is full of information signals. They can have a beneficial, neutral or a detrimental effect on your body depending upon your unique genetic makeup.

Welcome to the world of precision nutrition.

What Gini Does:

- Breaks down your complex health-nutrition-gene relationships
- Functions as a guide for your micro or macronutrient needs
- Helps you identify the best food sources optimal for your specific genetic profile.
- Coaches you and your family to meet your unique health goals

All health reports are classified based on hard data from ongoing research and the service is designed with a privacy-first mindset.

I just downloaded gini and I must say, it is amazing. It has already given me so many insights to my health and I'm thrilled to put the suggestions into action. Thank you for creating this.

- Nicholas

Tap into your full genetic potential

 #1 World's first DNA based nutrition label	 Coaching to help you change habits
 Easy-to-use at-home DNA testing kit	 Highly secure. No data sharing policy.
 Get actionable reports on mobile	 Smart food list
 Available on iOS and Android	 Based on scientific peer reviewed research

The right food, at the right time, in the right amount, can provide the right environment to your cells to live a long and healthy life.

What you get

Gini Stories

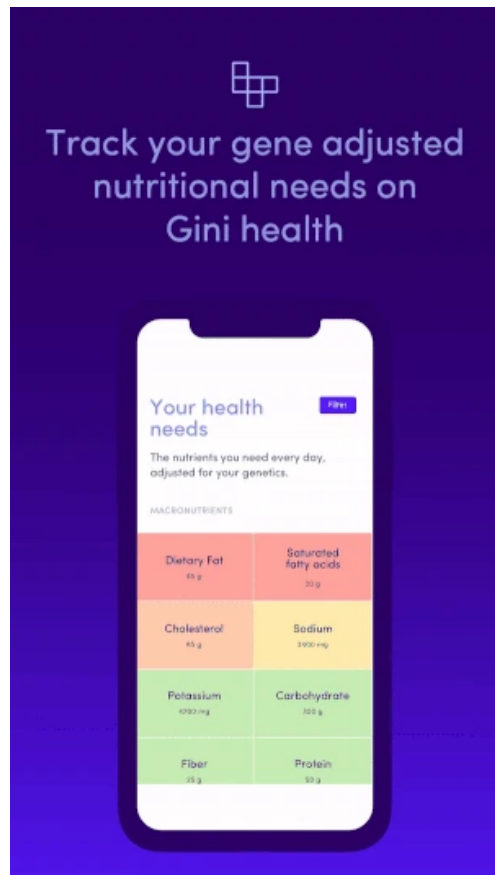

Discover how your health risks are connected to genes and nutrition.

A very fresh and innovative approach to look at genes, nutrition and health together in one place. Learn about risks, associated genes and nutrigenetic factors.

Gini Health

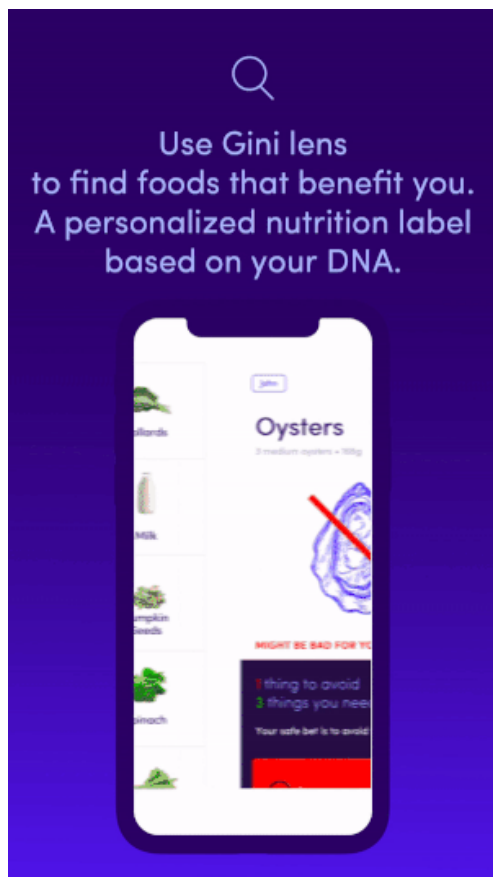

A snapshot of your DNA based nutritional needs.

An accurate guide for all of your micro or macronutrient needs - backed by peer-reviewed research.

Gini Lens

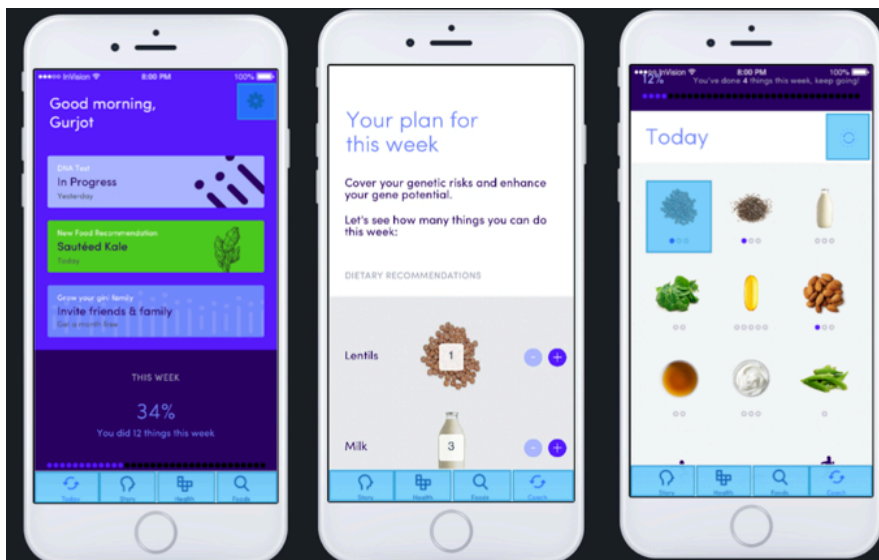

Your own personalized food nutrition label.

A revolutionary feature, Gini lens shows you the best and the worst foods that you can consume tailored for your DNA. This includes smart lists that builds custom lists of food that is best for your genetic profile.

Gini Coach

A food + habit coach tailored for you.

Be it loosing weight or training for a marathon, we'll manage the planning for you while keeping it fun and interesting. Stay on top of your health goals easily.

DNA test kit - How it works

Our simple DNA test kit

Step 1: Make Your Pledge on Kickstarter & Receive Your Kit
Once you receive your DNA test kit, register it under your name at ginihealth.com/register

Step 2: Swab Your DNA
Our test kit uses a simple process involving a cheek swab. Takes only 2 minutes to complete.

Step 3: Quick DNA Scanning
We will sequence your DNA at a CLIA and CAP certified lab, and keep you updated at every step of the process via emails.

Step 4: Start Using Gini
Install Gini on your iOS and Android device. Start exploring your genetic self. Your results will be ready in 2-3 weeks.

Science behind gini

The science of nutrigenetics and nutrigenomics is evolving at a fast pace. With cheaper testing and better accessibility to test results in a short period of time, more researchers are turning to DNA and genetic data.

Researchers are beginning to identify common Single nucleotide polymorphisms (SNPs) that affect vitamin metabolism. These

advancements allow us to optimize the requirements for specific vitamins and nutrients for different individuals, which in turn plays an important role in food selection. As research is still evolving, we will provide you an account on current studies and research to tell you how accurate science is for a given recommendation. The relationship between genotype and nutrients can be classified one of four ways:

- Convincing
- Probable
- Possible
- Insufficient Data

These classifications will be shown in future Gini releases to advise users on the stage of research each recommendation and story is currently at. Gini health aims to keep users informed about the latest research relevant to the individual. Keeping up with the latest DNA based research is the best way we have currently, to create and follow an individually optimized diet. The information we are able to access and use for this purpose will continue to get better as more research is completed. It's a good time to be part of this ongoing growth in research and we're excited to start making the science better.

“ Although common chronic diseases, such as atherosclerosis, cancers and neurodegenerative disorders are not caused by single genetic variants, it's clear that individual SNPs can influence disease risk. For example, individuals carrying the risk allele for a SNP (rs9939609) in the fat-mass and obesity-associated gene (FTO) weigh approximately 3 kg more than individuals with no copies of the risk allele. ”

– Lifestyle Genomics: Addressing the Multifactorial Nature of Personalized Health, By Dr. David M. Mutch., University of Guelph, Department of Health and Nutrition Sciences (Nutrigenomics Advisor to Gini Health)

Epigenetics at its core is how changes in our gene activity can occur

without changing the actual DNA.

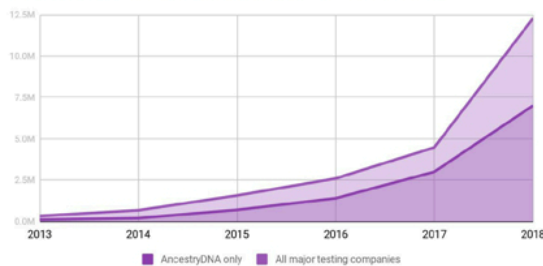

It is simply a complex interaction that plays out on daily basis between the genes you are born with, the actions you take and your environment. These are heritable changes that do not impact gene sequence. If genetics is the hardware, then the software layer is epigenetics, controlling the expression of genes.

You hold the power of a programmer and can influence epigenetics in many ways. Each decision you make essentially changes the expression of your genes, and some of these changes are long term. In a way, you are the master of your genetic destiny. By influencing epigenetic factors, and thus gene expressions, you can change your disease risk. This allows you to enhance and realize your maximum health potential, in turn helping you to live a long and healthy life. Just by realizing your own peak epigenetic performance, you are playing a part in strengthening human evolution.

More and more people now trust DNA data

Up, up and away

Total number of people tested by consumer genetic companies, in millions.

Direct-to-consumer genetic genealogy tests more than doubled in 2017.

1 in 25 American adults now have access to personal genetic data.

Source: ISOGG, Leah Larkin, company reports

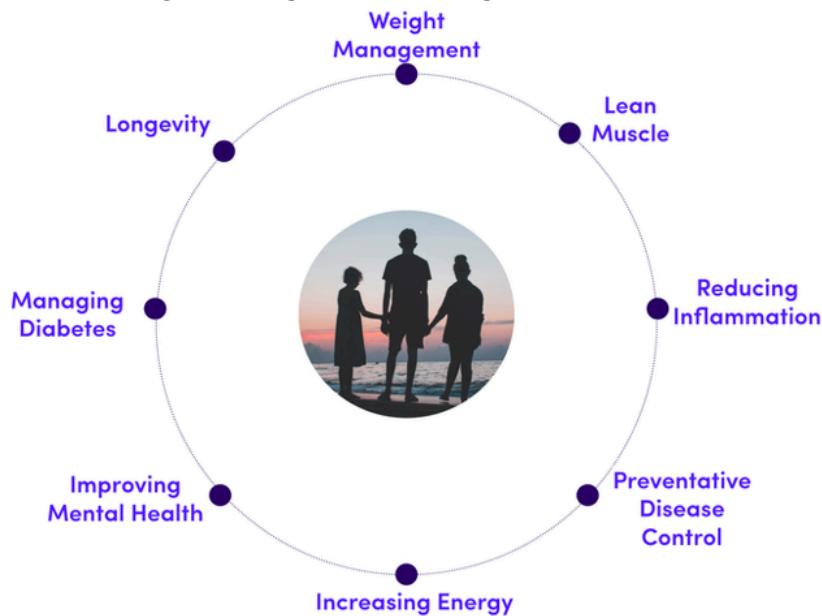

At the current pace, over 1B people will have their genetic data in the next 4 years.

Privacy promise:

- **No Data Sharing or Data Selling policy** : We don't share or sell to any third party including insurance companies and employers.
- **Privacy By Design**: This is the widely used privacy framework used by GDPR and many other data privacy regulations. This framework is designed by Dr. Ann Cavoukian, our privacy advisor and mentor. We take the proactive approach to privacy rather than reactive.
https://en.wikipedia.org/wiki/Privacy_by_design
- **De Identification**: We separate your personal information like name, credit card etc from your DNA data in our systems. That makes it difficult for hackers to access and make sense of data.
- **Encryption**: We use security and encryption principles to proactively secure data at all stages of experience.

Progress so far...

Our users love us

I have the story, health and lens options. So far this app works great for me. It **tells me a lot about what I need to eat** and what foods are good and not good for me. Also shows me what I could be at risk for. Great app!

-Jessica Esque

Gini Health

Gini Lens

New Products + Features

We're looking to build and market all of the below-mentioned items with the money we raise on Kickstarter

Our Own DNA Test Kit

We mail you a simple test. You swab your cheek and send the sample back to us. You can start using Gini, once you get the results.

Gini Lens Smart Lists

Dynamic lists that uses AI to learn based on your behaviour and suggest high nutrition foods that fit your DNA profile.

Gini Coach

Basic coaching feature. Suggests diet and helps you reduce risks based on epigenetics.

Gini Coach+

Custom coach that adapts to a goal. Better management of conditions like Type II diabetes, weight management and others. Adapts to existing diets like keto and paleo.

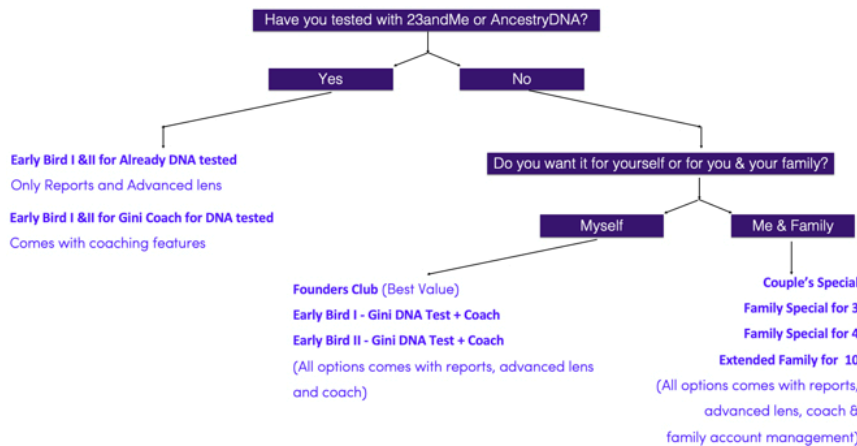

Family Accounts

Manage the accounts of your wife, husband or children from one location.

Risks and challenges

Shipping Risk: There is always an element of uncertainty when it comes to shipping a product, especially when it comes to international shipping. There might be unforeseen delays due to either postal strikes or customs holding up the package.

Supply chain risk: While we can plan for small changes in demand, big changes are harder to predict. If we see a huge surge in orders, there may be temporary delays in meeting demand as we need to print more boxes, procure sample collection kits and delays in DNA sequencing.
