Story

Hi, I'm currently a university student studying electrical engineering. I have ADHD, so it's hard for me to concentrate, and I always have gaps in my studying and knowledge. It's taken me six years to enter my 3rd year in university because I haven't found a way to study correctly, and the current tools available online don't cater to my needs. I learn best by asking questions, and I believe many other people are in the same boat I am. So that's why I created this software. This software is designed to help students learn by asking questions and getting explanations back. Imagine being able to learn by just asking questions and getting answers back. That's what this software does. Any question you have, any topic you're struggling with, you can get help with. I'm raising funds to help develop this software, hire a team, and use funds to train a better machine learning model. This is very costly since you need much computer processing power to train a machine learning model. I believe this software will help change how people learn and make it easier for them to get the education they deserve. I am willing to put in the extra work to make this software the best it can be, and I'm asking for your help. I appreciate your support.

Funding period

Sep 28 2022 - Oct 28 2022 (30 days)

Risks and challenges

Some of the risks involved with developing this project is the funding involved. The price to complete this may be much larger than I expect.

[Learn about accountability on Kickstarter](#)

Environmental commitments

[Visit our Environmental Resources Center](#) to learn how Kickstarter encourages sustainable practices.

Long-lasting design

This is an AI Project. This means that it will only get smarter as time goes on as more and more users use it, it will learn from that data.

Reusability and recyclability

This is a software, so it can be reused as much as people need it.

Sustainable materials

This is a software, so it doesn't require any materials.

Environmentally friendly factories

This is a software, so it doesn't require any factories.

Sustainable Distribution

This is a software, so it can be delivered electronically.
