Story

[Hi, welcome to Fast Robot Trader Kickstarter page!](#)

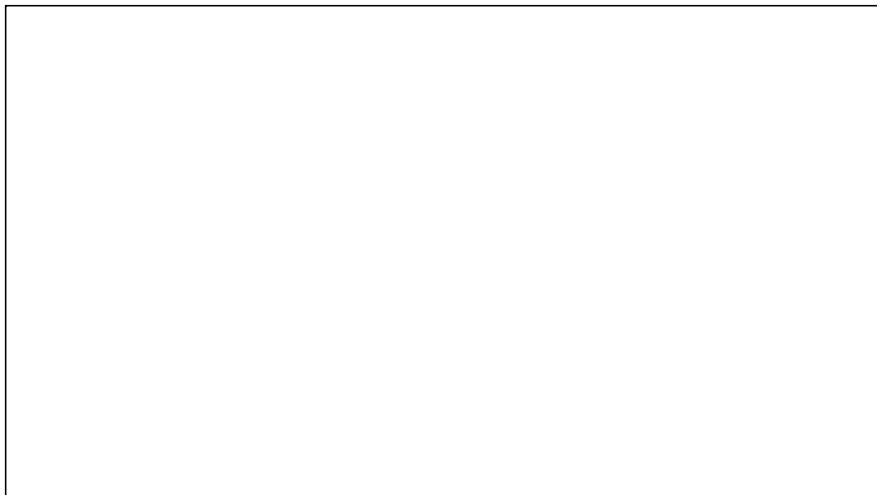

Fast Robot Trader is an opensource software that would be developed by Logica Analysis Inc. It lets anyone automate complex, quantitative trading strategies in forex, options, futures, stocks, ETFs and commodities markets. Anyone could download our software wich is the similar of thoses developed by banks or stock exchanges at more of million of dollars. We think that anyone should have access to that powerful trading software, not only banks. A downloadable SDK will be available for any developer who would want work on the trading algorithm.

The goal of Logica Analysis Inc. is to raise \$200,000. We will hire clever software engineer students and a Chartered financial analyst to develop the powerful algorithm and the interface of Fast Robot Trader

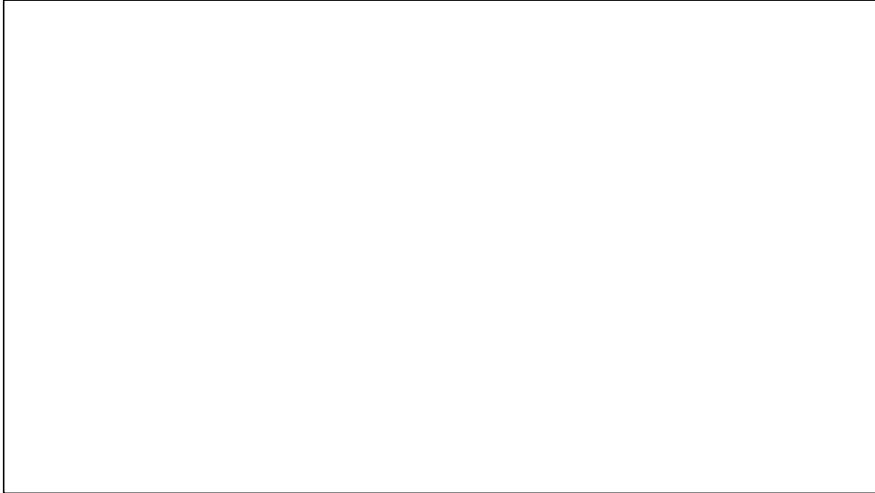

- *Back for \$5 or more to encourage us.*
- *Back for \$50 and get one month of full services (instead of \$1,000)*
- *Back for \$200 and get three months of full services (instead of \$3,000)*
- *Back for \$2,000 and get six months of full services (instead of \$6,000)*
- *Back for \$4,000 and get twelve months of full services (instead of \$12,000)*
- *Back for \$8,000 and get twelve months of full services and marketing visibility from all clients (instead of \$12,000)*

So what this software is really ?

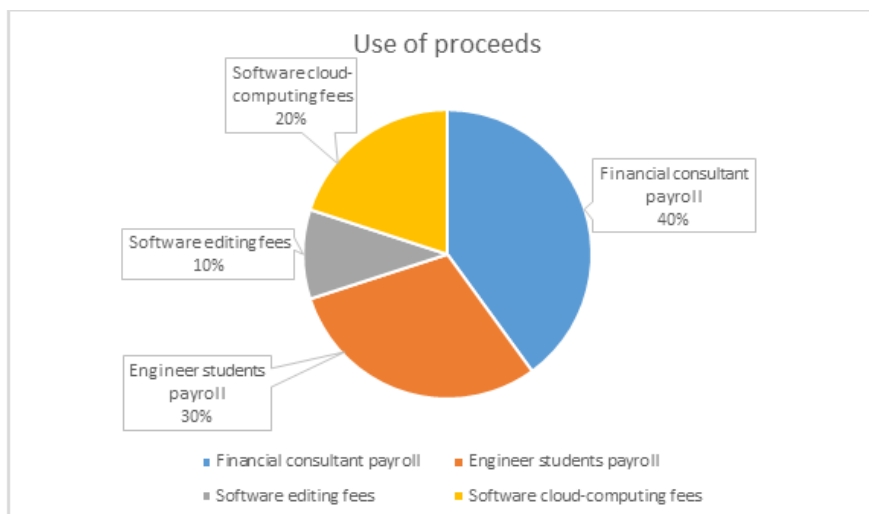

FastRobot Trader understand that for you. It learns the business and stock markets live news from various sources, and analyses big data; in order to buy or sells securities for you, and makes you earn profits. Just set the amount you want to invest for each securities and our artificial intelligent robot works for you.

An example of a basic trading algorithm used to automate buying in stocks:

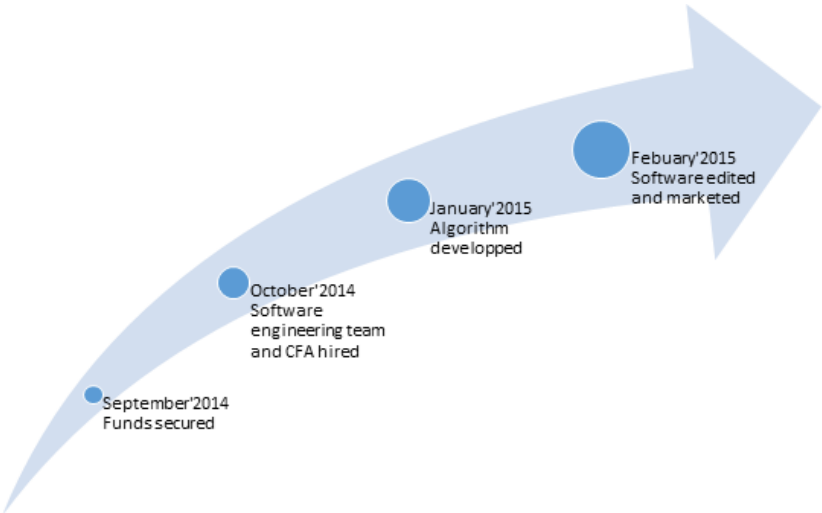

For experts, FastRobot Trader is the specific software you need to make high-frequency trading. High-frequency trading (HFT) is a type of algorithmic, specifically the use of sophisticated technological tools and computer algorithms to rapidly trade securities. HFT uses proprietary trading strategies carried out by computers to move in and out of positions in seconds or fractions of a second.

Where your money goes ?

What is the schedule ?

Please, pledge massively to encorage this project of software engineering students.

Funding period

Jul 20 2014 - Aug 24 2014 (35 days)

Risks and challenges

What are the risks and challenges of this project ?

Business risks

1. Currently, there are insufficient funds to accomplish management's immediate objectives.
2. Dependence on key employees like software engineer, suppliers or agreements.
3. Possible need for additional funds in the future.

Industry Risks

1. Product Obsolescence
2. Competition
3. Third party credit risk
