Colorkeys: Helping Kids Learn Piano

Help kids love music! We've got a color based method that teaches any kid to play piano & read music. Help us turn it into a video game

Story

Our Story:

Love music? Colorkeys was conceived more than ten years ago by a teacher who wanted a way to pass on his love of piano and music to his students. Traditional music classes for an hour a week just didn't reach most kids and usually ended with more frustration than enjoyment. He needed a way to quickly teach full classes of students to learn how to play piano and read music in a fun, engaging, and academically sound way. Colorkeys was invented to solve this problem.

Colorkeys is based on a patented color-coded note system where music and notes are represented in colors that correspond to colored stickers that are used on music keys. This helps kids quickly make the connection between the notes on the page and the keys on the keyboard. Using this simple, easily understood concept, kids can begin to learn in a few hours what usually takes months of lessons to achieve –even for kids as young as five.

We spent many years researching the most effective piano methodology which we developed into a software program designed to aid a teacher in a classroom setting. The program lets kids learn at their own pace and provides instant feedback and rewards to promote learning. Over the past five years, the program has grown quickly and is now a proven teaching tool that is being used by dozens of schools and thousands of kids throughout the United States and Canada.

Why We Need You:

We are a small company that has had success with our school based program. There are thousands of students using the program, but its exposure is limited to the schools offering Colorkeys in their curriculum. There are millions of kids who will never even be exposed to playing music because of budget cutbacks at their schools and money concerns at home. As educators and as music lovers we find this unacceptable!

We want to take our success in the classroom and make the Colorkeys method available to children everywhere at an affordable cost. We need

Funding period

Dec 14 2011 - Jan 18 2012 (35 days)

your support to help us create an engaging music based video game that will enable any child to learn how to play, read, and enjoy music.

Overview of How the Game Will Work:

Designed with the dual purpose of both fun and sound academic principles, the video game will appeal to kids and encourage them to move forward and keep growing in their skills. They will be required to finish tasks and stages that kids are used to seeing in games before moving on to more material. A point system that will be based on finishing activities and accurate playing will encourage their natural competitive behavior to achieve better and better results. Kids will not even realize that they are doing what all music teachers want from their students – namely, practice! They will be mastering songs and understanding theoretical material all through playing the game.

The levels of the software will be sequential; students can't move ahead until they have mastered a concept. Teaching new concepts is done through short, instructional videos that are reinforced through the gameplay. Concept understanding is practiced with drag-and-drop activities and tested with periodic, short quizzes.

Help Us Help Our Schools

We are serious about our commitment to enhance music education and make it accessible to everyone. A big part of what we do is to help educators in our schools teach music to kids. That is why after this game is developed (with your help!), we will use the game to help give back to school music education. For every 100 games that are sold, we will donate a Colorkeys school program package to a school in need (feel free to email us with worthy suggestions). This will include everything a school needs to make a music program a reality, including the Colorkeys educational software, up to 30 digital keyboards, Colorkeys educational materials, and teacher training. In order to make that happen we need your support. Please help us develop this game!

We Want Your Feedback

We love feedback. Everyone who chooses to receive a beta download of our game will be able to provide us with insight into how well it is working in their home for them and their children.
