Funding Unsuccessful

The project's funding goal was not reached on Sat, January 10 2026 12:47 AM UTC +06:00

Story

CastAI is your personal AI talent assistant that helps actors book more auditions, faster. It finds the right roles across major casting platforms, filters them to match your profile, and submits applications automatically—saving hours of work every day. Whether you're a newcomer or an independent performer, CastAI gives you a competitive edge and puts your career on fast-forward.

Back this campaign to be among the first to access CastAI and see how effortless auditioning can become. Early supporters will get exclusive access, priority updates, and the chance to shape the first version of their own digital talent agent.

Why CastAI Matters

Actors spend countless hours searching for roles, preparing submissions, and competing against hundreds or thousands of others, all while trying to improve their craft. CastAI removes the tedious, repetitive work so you can focus on acting, training, and performing. It levels the playing field, giving every actor, especially newcomers and independents, access to opportunities they might otherwise miss.

What You Get (MVP Features)

Role Discovery & Matching: Instantly find auditions tailored to your profile

Automatic Submissions: Send applications with optimized materials without lifting a finger

Personalized Dashboard: Track submissions, see upcoming opportunities, and prioritize roles

Exclusive Early Access: Get the first version of CastAI before public release

Roadmap & Timeline

Phase 1 – MVP (Kickstarter-funded, Months 1–3)

Funding period

Dec 11 2025 - Jan 10 2026 (30 days)

Early access for backers

Personalized actor dashboard

Automated role suggestions & submissions

Phase 2 – Beta Release (Months 4–5)

Daily updates on new opportunities

Priority notifications for high-value roles

Feedback-driven improvements

Phase 3 – Full Launch (Months 6–8)

Expanded platform coverage

Advanced career insights

Mobile access & notifications

Backer Rewards

Early Access: Be first to use CastAI

Priority Beta: Test new features before public release

Founding Member Badge: Show you were part of the launch

Direct Feedback Influence: Help shape the product

Risks and challenges

The main risks include building a reliable MVP quickly, ensuring AI matches roles accurately, and avoiding automated submissions being blocked by casting platforms. Additional challenges are gaining trust from actors and early adopters, and securing sufficient funding for development and marketing.

We plan to overcome these by:

- Building and launching a MVP to test and iterate fast.
- Engaging early users for feedback to improve accuracy and UX.
- Designing submissions to respect platform rules and minimize automation issues.
- Prioritizing targeted marketing to build trust and traction.

Use of AI

I plan to use AI-generated content in my project.

What parts of your project will use AI generated content? Please be as specific as possible.

Casting Recommendations & Role Matching The system uses AI to analyze an actor's profile (skills, appearance, experience) and generate casting-type suggestions. This includes recommended character types, potential role categories, and "best fit" casting directions. Actor Coaching & Feedback AI is used to generate performance notes, self-tape coaching, and personalized improvement suggestions based on the user's input. Sample Audition Sides / Scripts Short, example audition sides may be generated using AI to help actors practice. Page Content Writing Assistance Some written copy on the Kickstarter page (e.g., text descriptions, feature explanations, or section drafts) was created or refined using AI tools. Prototype Output During early development, the MVP prototype uses AI-generated responses for testing and showcasing core functionality.

Do you have the consent of owners of the works that were (or will be) used to produce the AI generated portion of your projects? Please explain.

Yes. CastAI uses commercially licensed AI models (such as OpenAI's GPT models) that are legally permitted for commercial use. I am not training a model on copyrighted material, nor am I uploading or using

any third-party protected content without permission. All AI outputs are generated from: User-provided information (actors enter their own details) Public-domain knowledge The model's commercially licensed abilities No copyrighted scripts, films, or protected creative works are used as training data or source material for the AI. All branding, UI, design, and product strategy are created by me and my team.
