 What is a prototype?

 **Production Prototype**

Funding period

Aug 27 2017 - Sep 26 2017 (30 days)

About

I am an electronics graduate and Post graduate degree in Management - MBA and Diploma in Business System analysis and Project management from Canada.

I have been working in B2B sales operations for 12 years handling different portfolios , during these years i have came across many software and ERP platforms which are well known and very complicated to use , any of the small organisation cannot even think of purchasing Them because of complexity and cost associated with the same ,

so i developed an idea of ERP for all which can be afforded and easy to use software , so i have developed Mind Rich CRM which is very easy to use and affordable also, now with the help of communities like Kick Starter i will develop the other modules and complete the dream of ERP for all mission .

i have developed the CRM module as the first module and i am developing the other modules also like HR ,Accounting, material management .

Because i think technology is the basic need today for all and every one should have access to technology

So the as per my idea the software is ready to use

you can try it before backing my project at given link

<http://www.demo.mindrichcrm.com/admin>

User Name: admin@mindrichcrm.com

Password: aistro@321

So please check the demo version and back my project idea so that i can deliver the actual product to you in November 2017 as some functional testing is going on right now and android app is also getting developed now.

To help me bring the technology for all Mission live your contribution is very necessary.

Risks and challenges

Business Software is an amazing, powerful option to make your business more efficient and capable and to offer your customers power and novel ways to engage with you which bring them enormous value.

However, a business software project is an expensive and risky undertaking and a badly failed business software project can end up producing nothing of value at great expense.

Here are the three ways, we'll use, to reduce risk on our software development project and make sure to end up with a viable, positive outcome.

1. Taking Small Bites: Minimum Viable Product

Getting real-world feedback early means we have an opportunity to measure real response to our software.

2. Identifying and Addressing Technical Risks Early.

By verifying early that technical challenges are solvable, we greatly reduce the risk of large failures late in the project when we've made a large investment.

3. Engaging Users Early and Often in the Project.

Users will tend to describe what they're already used to, rather than what they really need. Small but loud minorities of users may skew the results by raising more concern about a particular issue than is warranted.

Other Ways You Can Help

Beyond making a monetary contribution, you can help us by sharing our campaign with all your friends and family on Facebook and Twitter and all your colleagues on LinkedIn. The more entrepreneurs know about Appy by the time we are ready to launch, the smoother our introduction will go.

We appreciate your support greatly.

Thank you for your time.
