Story

Meet LobbyBot - Your Lobby. Your Music.

Imagine launching Valorant or Fortnite and hearing your favorite song perfectly timed with the game's launch sequence or in-game lobby. Whether it's a chill lo-fi beat or a hype-up EDM drop, it kicks in right as you load in or queue up with friends. That's what LobbyBot is all about — turning your lobby experience into something truly personal.

Funding period

May 23 2025 - Jul 1 2025 (39 days)

What I'm Building

LobbyBot is a desktop app for windows that lets players customize their in-game music for popular titles such as Fortnite and Valorant. It syncs seamlessly with your system and replaces default lobby tunes with your own custom audio — timed perfectly with the game's menu flow. Think Spotify vibes, but built specifically for gaming immersion.

I am raising funds to take LobbyBot from polished prototype to full public launch — with a sleek UI, expanded features, better backend stability, and support for more games. The core tech is already built and working — I just need your help to level it up!

Current UI for LobbyBot (polished prototype)

💡 Why This Matters

Gaming isn't just gameplay — it's the whole experience. Before the match begins, the lobby sets the tone. It's where you banter with teammates, get in the zone, or just chill after a busy day.

LobbyBot transforms that moment by letting you:

- 🎵 Set your favorite track as the lobby theme
- 🎮 Sync music playback with real-time game state changes
- 🌐 Create and share curated lobby playlists with friends

It's about giving control back to the player and making something routine — the lobby — actually a freely customizable space.

Why I Care

I've been gaming my whole life, and like a lot of you, I grew up bonding over playing with friends, late-night matches, and listening to music while gaming. I created LobbyBot because I wanted to automate and customize that feeling — and amplify it for today's gamers.

I'm a game dev student and programmer passionate about merging utility with creativity. This app started as a side project and quickly became something worth sharing with the world. It's not just about music — it's about enhancing how we connect through games.

Where the Funds Go

Your support will directly help us:

Scale our backend so more users can enjoy LobbyBot smoothly

Fix multiple minor bugs and edge cases

Redesign and polish the UI for a better user experience

Add new features like in-app playlists, volume fading, more game phase options, and more game integrations

Launch a proper marketing push to grow the community

Expand our user base and keep improving with feedback

Support our incredible team whose dedication and nonstop passion are driving every line of code, design, and feature that makes LobbyBot truly exceptional and one of a kind

How I'll Make It Happen

I already have a working version of LobbyBot, integrated with two of the most popular games out there. The development roadmap is clear, and I am dedicated to bringing this project to full release with your support.

With your help, I'll hit the milestones needed to bring LobbyBot from a creative tool to a fully supported platform that gives gamers more

A photograph showing three hands, each making a thumbs-up gesture. The hands are positioned horizontally across the frame against a solid, bright blue background. The lighting is even, highlighting the skin tones and the form of the hands.

Project budget

Last updated May 19, 2025

This is a projected budget provided by the creator and may be subject to change.

Risks and challenges

While launching and scaling a new software product always comes with risks and challenges, I've worked hard to minimize both through careful planning and execution. LobbyBot is already in a working state, with a functional prototype compatible with Valorant and Fortnite.

Our backend architecture, music integration system, and user interface have all been developed and tested. I've established a clear roadmap for scaling, polish, and feature expansion, and are working with experienced developers who understand both gaming and software delivery pipelines.

In addition, I'm building on proven technologies and frameworks, and our fulfillment plan for digital distribution is straightforward and secure. With a focus on transparency and community-driven development, I am confident that your support will directly contribute to a smooth, timely, and rewarding launch experience.

Use of AI

This project includes content generated with the help of AI tools. Specifically: We used ChatGPT to help write and refine parts of the campaign story and project description. We used ChatGPT's image generation capabilities to create our official logo. All AI-generated content was carefully reviewed, curated, and aligned with the original creative vision of the LobbyBot app. The app itself — including all code, functionality, and audio integration — is entirely developed by our team and does not use AI. No proprietary datasets or third-party copyrighted material were used in the creation of any AI-generated assets. We believe

AI is a powerful creative assistant, but the heart of LobbyBot is built by our hardworking team, with thoughtful design and engineering at its core.

Sustainable Distribution

LobbyBot is a fully digital product, which means there is no physical manufacturing, packaging, or shipping involved. This significantly reduces environmental impact compared to traditional consumer products. By distributing the app entirely online, we eliminate transportation emissions and material waste, making our fulfillment process inherently sustainable.
