Story

As an aspiring entrepreneur with no coding skills, my journey toward creating a QR code-based mobile payment application was nothing short of a rollercoaster. It all began during a trip to a local café, where I witnessed a long line of frustrated customers waiting to pay with cash or cards. There had to be a better way to make payments faster, simpler, and more convenient for everyone. It was at that moment that the idea struck me: a mobile payment app using QR codes to streamline the process, allowing people to make payments with just a scan.

Despite the excitement of the idea, I was faced with a massive obstacle: I didn't know a thing about coding. I had no technical background and had never written a line of code in my life. But the more I thought about it, the more I realized that technology was advancing rapidly, and if I didn't jump in, someone else would. My first step was to educate myself about the problem I was trying to solve and how QR codes were being used in the payment industry.

I dove into the world of digital payments, learning about how QR codes work, the benefits of contactless transactions, and the security concerns associated with them. I wasn't aiming to become a coder, but I wanted to understand the process well enough to communicate my vision to others.

With this knowledge in hand, I started sketching my idea. I mapped out how the app would work: users could simply scan a QR code to make a payment, and the money would transfer securely to the merchant's account. I designed a simple user interface (UI) that would be intuitive, easy to navigate, and secure—key features for building trust with users.

I wanted to create an app that would make payments as simple as scanning a code on your phone. I worked closely so the app's design and user experience matched my vision.

I actively participated in the development process by working on the user journey and identifying potential pain points. I created user personas and gathered feedback from friends and acquaintances who represented the typical app users—people who were busy, tech-savvy but not necessarily experts, and looking for a hassle-free way to pay.

Funding period

Jan 2 2025 - Mar 3 2025 (60 days)

After several months of back-and-forth, I was ready to unveil the first prototype of the app. The QR code-based payment system was simple yet effective—users could scan a merchant's code, confirm the amount, and complete the payment in seconds. There were hiccups, of course—some bugs, minor usability issues, and a few technical glitches—but the foundation was solid.

Risks and challenges

The main challenge is going to be for the initial days regarding awareness and acceptance of new types of mobile payment application.
