The Park Project : Stop Circling. Start Parking

A convenient mobile app to find real-time available parking spots near you. Thanks to community and crowdsharing. P2P for parking.

Story

Where it all began

Funding period

Jun 23 2025 - Aug 2 2025 (40 days)

- In February 2024, this photo was taken of me with my mom and dad in front of Niagara Falls. They obviously look like they are shivering from the bitter cold, (though my smile tells a different story!). What the photo doesn't show is the 15-minute walk we had to take after circling endlessly for parking.
- That frustration, discomfort, and wasted time stuck with me. It's exactly moments like these that inspired the creation of this app—because finding parking shouldn't ruin the experience of the destination.

So, I did what any frustrated builder would do: I sketched, designed, and built a (very) basic version of an app that could solve this. I called it **Park Project**.

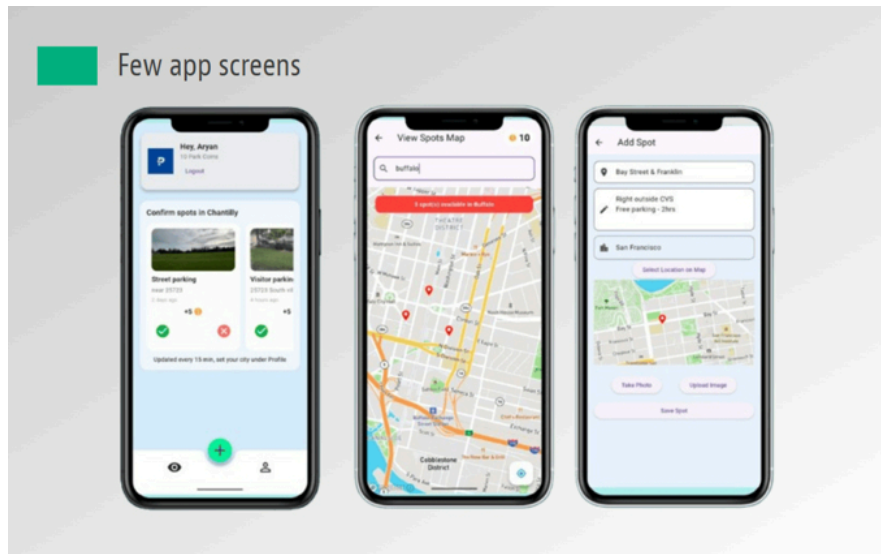

Today, it's grown into a full concept:

-  - Real-time open spot sharing,
-  - A map + list view of available spots (garages, private, and street),
-  - A reward system (Park Coins) to encourage community participation,
-  - Beta integrations with **CarPlay**, **Android Auto**, and even **Wear OS**,
-  - And future updates to include reporting lane closures and construction zones.

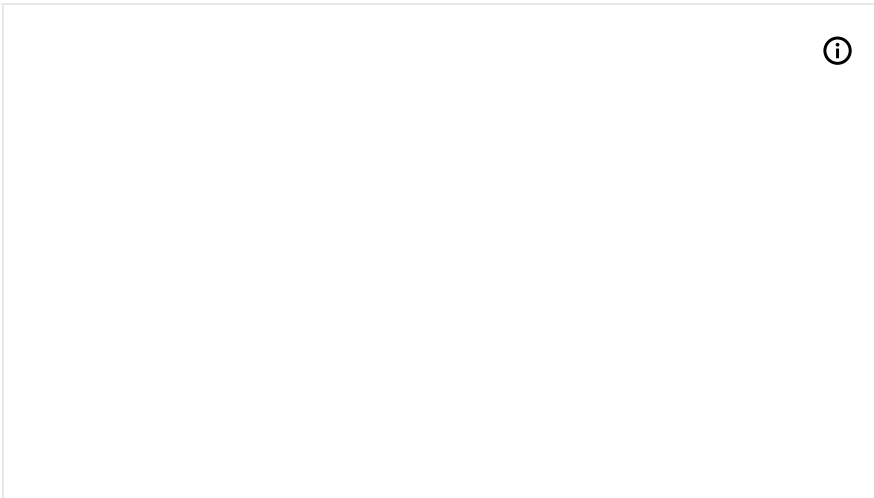

All of this, with one goal:

To make parking one less thing to worry about — and give people back their time.

This is a projected budget provided by the creator and may be subject to change.

Risks and challenges

While we've already built core parts of the app and are handling primary development in-house, there are still a few challenges we're preparing for:

Platform Integration Complexity

Integrating with CarPlay, Android Auto, and Wear OS requires approval and strict UI compliance from Apple and Google. We're working with experienced developers to streamline this and follow all best practices.

Real-time Parking Data Accuracy

Since ParkProject relies on community-driven and updated data, accuracy depends on user participation. To solve this, we're building strong incentives through our Park Coins system and real time checks.

Beta Feedback & Testing

Launching across multiple devices and car platforms introduces variations in behavior. We'll roll out in waves and closely monitor user feedback to fix any bugs quickly.

Location-Based Compliance

Handling location data responsibly is key. We've planned for basic legal reviews and will follow all privacy regulations (including Canadian & U.S. guidelines).

We're confident in our roadmap and already have working components,

but like all technology projects, we appreciate your patience as we perfect the experience.

Environmental commitments

[Visit our Environmental Resources Center](#) to learn how Kickstarter encourages sustainable practices.

Long-lasting design

ParkProject is designed for long-term relevance — not just a temporary parking tool. Its infrastructure supports ongoing community contributions, feature evolution, and adaptability to new cities or use cases. No throwaway features. No planned obsolescence.

Sustainable materials

We use platforms like Firebase, Google Cloud, and scalable, low-footprint infrastructure designed for energy efficiency — allowing us to grow responsibly.

Sustainable Distribution

All rewards are digital — meaning no physical shipping, packaging waste, or unnecessary transport emissions. From beta access to credits and digital signatures, the impact is minimal and fully trackable.

Something else

Tackling Urban Traffic & Emissions

By helping people find open spots faster, ParkProject directly reduces:

Circling time (which causes up to 30% of inner-city congestion*)

Idling and CO₂ emissions

Last-minute stress detours that contribute to unnecessary driving

Every successful spot match is one less car looping the block. We're not just solving a convenience problem — we're helping reduce city traffic and fuel waste, one spot at a time.
