Jun 7 2018 - Jul 11 2018 (33 days)

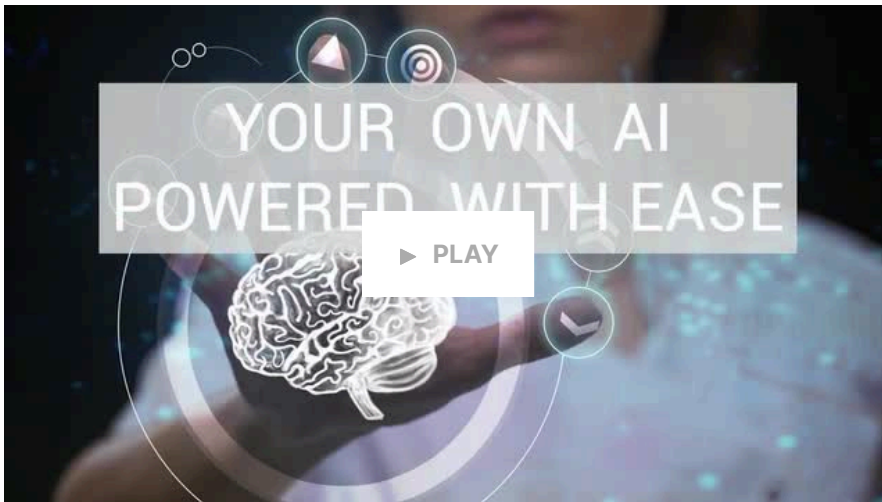

Story

withEase (**wE**) is a comprehensive Platform as a Service (PaaS) providing a protected **identity layer** in any Internet collaboration. **wE** uses Artificial Intelligence (AI) and simple conversational interface to **control, protect and monetize personal and proprietary information**.

As a person, you can **get paid** for:

- exposure to **ads** based on your own preferences and careabouts
- your AI's responses to **market research** queries
- your AI's participation in **polls** based on your own profile
- intellectual property in **new skills** defined by you

As an enterprise, you can **augment the dreaded IT lifecycle** and **implement new skills in a manner of minutes**.

wE has been built in follow up to the [successful Kickstarter funding project](#) and with significant input and guidance from original backers.

Current version is operational. **wE** will grant free access to all Kickstarter backers immediately upon your pledge.

This version is just a first completed phase of our development and we need your support to continue adding new features and functionality.

The remainder of the page:

- describes our **funding and stretched goals**
- outlines your **rewards strategy**
- shows an example of how **you can monetize your actual Facebook data**, and
- closes off with our analysis of key **risks and challenges**

Funding Goals

Overview

- User-defined reminders - 3 months
- Service Catalog - 3 months
- New Skills in Public Domain - 3 months
- Biometric Data Vault (prototype) - 6 months

User-defined reminders

Current version of **wE** platform cannot react to "user-defined reminders"

(user-defined ability to execute certain action at some future point in time).

Essentially, **wE** is a giant parallel queue processor with an AI algorithm determining the priorities and proper resource allocation. For example, incoming email message vs. messaging between two **wEvatars**. We need to add a "reminder queue" to the existing pool of queues and teach the AI on how to use it.

The "reminder" design is completed and we need to your help so that we can assign proper resources for development and implementation with the target of **three months**.

Service Catalog

Over the years of development, **wE** has accumulated thousands of internal services. Anywhere from a trivial "convert this text to lower case" to resource-demanding "export the entire content of **wEvatar** and ship it to owner".

wE also has a nomenclature, a framework which AI uses in process of app generation from policy text, or to be more specific, from meta skill. Like, properties of service input parameters (a.i. typed, mandatory vs. optional, etc.) and operational parameters (a.i. public vs. propitiatory, resource allocations, billing parameters, etc.) However, this framework was finalized relatively recently creating a legacy of thousands of already available services.

We need your help to allocate proper resources to (a) retrofit legacy services and (b) teach **wE** AI as to their intent. Again, we are targeting a period of **three months**.

New Skills in Public Domain

For every \$10K in backing total, wE will also deliver a new skill in public domain. Actual skill will be determined by vote of all backers. Please see the Rewards Primer. The delivery schedule will be published soon after the closing of this funding project. Kimberly Adair Clark

Personal Biometric Data Vault - Prototype

With inevitable proliferation of biometric authentication, a fundamental issue emerges: biometric data privacy. When our email addresses, passwords, credit card numbers get compromised, we can replace them with new ones.

When our iris biometric template gets stolen, we can ... do what? New iris, maybe?

A patent "Biometric verification with improved privacy and network performance in client-server networks"(*) describes a method where:

- your biometric templates never leaves your intelligent device
- your biometric templates is encrypted using keys which would self-destruct in any unauthorized attempt to access their content and effectively render the biometric template unusable
- your input and existing biometric templates will be compared while encrypted; once encrypted biometric templates will never be decrypted for any reason whatsoever
- the only information ever leaving your intelligent device will be the resulting authentication or verification score (a.i. quality of your authentication/verification)

With exclusive license to the patent, we intend to build a prototype of a "personal biometric data vault" with the implementation target of six months.

(*) [US Grant US9189612B2](#), [EU Grant EP2813961B1](#) (multiple citations)

Stretched Goals

In case this project gets oversubscribed, we will add resources to our existing development threads:

- full implementation of the **ad delivery framework**
- **skill store**
- adding **new messaging protocols** to currently email-only
- developing a **dedicated app** with added conveniences for user interaction
- **browser plug-ins** opening browser service API to **wEavatar**
- conversion of **credEase** digital currency to **blockchain** and **cryptocurrency**

Rewards Primer

Following rewards apply to all backers of our Kickstarter funding project.

Free use of the wE platform during the funding project

Every backer will be provided with a **wE**avatar and access to the platform. Like in the real life, **wE**avatar's usage of the platform will be metered, reported to backer and limited to the pledged amount. However, usage of **wE** during the funding project will be free and all **wE**avatars will be reset to the actual backing amount at the close of the funding project.

Think of it as: **You will use your pledge as "Monopoly Money" for the duration of the funding project.**

Our objective is to provide the backers with the tangible sense of the **wE** business model:

- **wE** will provide you with the full suite of computing facilities to protect, control and monetize your own data
- yes, you will pay for the usage of **wE**
- however, do expect that value of your data vs. the cost of managing it will be profitable for you, like it is for the Internet giants today

Doubling of credEase allocations

All backing amounts will be converted to *credEase* ([wE's \\$US pegged currency](#)) using the mid range conversion rate of \$Can and \$US at the point of the funding project closure.

Further, all *credEase* amounts will be doubled and allocated to backers' **wE**avatar's.

Voting rights for selection of new skill development in public domain

Using current implementation of **wE**, Backers can vote for any number of desired skills by allocate up to the total of the backing amount to any selected skill. Backers can vote any number of times. Only the last vote will count. Voting will close with the closing of the funding project.

Main reasons for an ongoing vote are our objective to:

- discover and rank as many skills as possible, and
- allow backers to influence that vote with the maximum of their backing

Founder Privilege

Backers **wE**avatars will be awarded with the Founder Privilege which will include:

- waiving of all banking charges upon redemption of *credEase* up to the total of the original backing amount

- maintaining backer's **wEavatar**'s financial reputation at a minimum of double the original backing amount
- maintaining backer's **wEavatar**'s network reputation at the highest level, so that not only the backer's **wEavatar** would benefit from it, but so would the entire backer's network

IMPORTANT: FOUNDER PRIVILEGE IS REVOCABLE IN CASES OF REPEATED INSTANCES OF USER MISREPRESENTATION, MISUSE, OR OUTRIGHT FRAUD!

Reward Benefits

Teach my wEavatar new skills - Define new or modify existing skills. Enable your **wEavatar** in support of your own community.

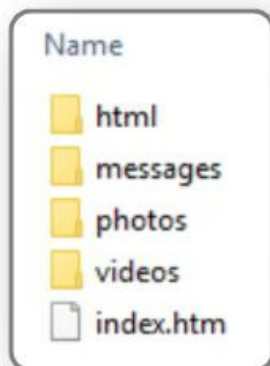

Monetize my new skills - Define new or modify existing skills. Use **wE**'s skill store to monetize your new skill.

The Midas Touch! - Your choice of plans "[Brand](#)" or "[Premium](#)". If you choose "[Brand](#)", all of your **wEavatar**'s transactions will be transferable to cash. Meaning, both your payables and receivables will result in [redeemable credEase \(cEz-r\)](#). Pardon the pun, your **wEavatar** touches a transaction, the resulting *credEase* amount turns to cash(able) on either side.

Monetize YOUR OWN Facebook data

Step 1 - [download your Facebook data](#)

Step 2 - Locate the zipfile containing your data download, right-click the folder and select Extract All, then follow the instructions. The resulting folder may look similar to:

Sample Facebook data download
structure

To add selected number of Facebook topics and any others of your choice:

Step 3 - Double click on file "*index.htm*" and open the page with your data.
Select "ads" and see topics Facebook believes are important to you.

Step 4 - Reply to any email from your **wE**avatar with: #monetize add:
<cut&paste any number of Facebook topics>

Step 5 - Send your email

OR

To add all Facebook topics:

Step 3 - Select directory "*html*" and find file "*ads.htm*". This file holds your topics of interest.

Step 4 - Reply to any email from your **wE**avatar with: #monetize add

Step 5 - attach "*ads.htm*"

Step 6 - Send your email

Risks and challenges

YOUR PRIVACY

YOUR ABILITY TO CONTROL, PROTECT AND MONETIZE YOUR OWN
INFORMATION IS THE CORE OF wE'S VALUES!

We believe, we got it covered, but are continually open to learning. Any of
your concerns and suggestions regarding privacy will receive our
immediate and personal attention.

WE IS NOT A BUSINESS, YET

To this point, all our effort were focused on development. Occasional early adopting customers contributed financially and, more importantly with advice and guidance. Nevertheless, wE does not have any discernible business infrastructure like sales, marketing, customer support, etc. Just product development. With the proceeds of this project, we intend to keep it the same. Future business infrastructure will be financed through different means.

SCALE

We cannot predict the level of backers' interest in our project. While we do believe current platform can handle very large number of simultaneous users, we will be tracking this issue very closely.

SPAM

wE uses enhanced email for notifications. While each email is branded for a single communication with a single user and with personalized encoded keys, potential for SPAM is always a concern. wE's active security features are designed to detect SPAM and, as an initial measure, notify potential offenders accordingly.

WITH CONSUMER IN MIND

Arguably, wE can be of benefit to both consumer and enterprise. Consumer gets personal AI, which they don't currently have. Enterprise augments IT, which they dread.

Our strong preference is that the future of wE gets to be driven primarily by consumers. Therefore, your support for this project would mean much more than just the monetary value of your backing.
