Story

BlinDate was born out of a desire to revolutionize the modern dating landscape. In 2021, after years of navigating dating apps and their repetitive inconveniences—endless swiping, generic conversations, and the exhausting effort required to find meaningful matches—our founder, Clyde, started envisioning a radical, efficient approach to dating apps.

What if the entire dating process could be streamlined? Instead of going on time-consuming dating app grinds again, what if an intelligent system became your Personal Dating Assistant? This assistant will save your time and effort as it gets to know you personally; your tastes, passions, types, and values. The assistant will then find people compatible with the important qualities you look for in a partner and set up a date, all without you lifting a finger!

Think of it like a trusted friend saying, *"I know someone perfect for you. Want to go on a blind date?"*

In 2021, the idea of letting artificial intelligence fully handle the dating experience was met with skepticism. Many interviewed individuals in the dating market were hesitant to trust a machine with something so personal, so intimate, as love. A year later, in 2022, the rise of ChatGPT changed everything. AI became mainstream, to the point that other dating apps started using AI for matchmaking. Unlike other apps, we at BlinDate believe dating apps should function as true assistants that know users best, help users save time and effort, and are there to help users navigate the relationships they've made.

Clyde, with his background in AI/ML and Digital Twin technology, was inspired to take things a step further. He wondered: what if we use AI to create a digital version of a person--one that could simulate multiple relationships and learn from them? That is how the Digital Twin concept was created.

If you're an anime fan, think of Naruto's Shadow Clone Jutsu—where Naruto creates multiple sentient clones of himself that experience and learn things on his behalf, all while retaining everything they've learned.. A similar concept was explored in *Black Mirror's Hang the DJ* episode, where AI-powered digital twins simulated relationships to determine each match's compatibility, based on a wide range of

variables that come with relationships. These ideas reinforced our vision: a dating app that helps you find someone you'll truly connect with, based on what you personally value the most.

Ultimately, our mission goes beyond fixing issues with dating apps. We see a deeper issue, especially with the endless grind of dating and matchmaking in apps. Most apps today create the illusion of unlimited options, thriving on keeping people single, and making individuals feel replaceable with just one swipe. This cycle has contributed to higher divorce rates, fewer healthy relationships, and an increasing number of people struggling with loneliness.

At BlinDate, we're building a long-term solution—an app that helps you find real compatibility with real people. And once you're in a relationship, we plan to provide features to help you thrive as a couple, ensuring you're not just matched but also set up for lasting success.

Dating shouldn't feel like an endless grind. It should feel like a meaningful journey towards your happy ever after. At BlinDate, we're here to help.

Risks and challenges

Common risks and challenges for Blindate include ensuring user privacy and security, as dating apps handle sensitive personal data. User retention can be difficult in a competitive market, and content moderation to maintain a safe, respectful space is an ongoing challenge. Additionally, the matchmaking algorithm must avoid biases to ensure inclusivity, while monetization needs to balance free access with revenue generation. The crowded dating app market requires differentiation, and as the app scales, infrastructure must support growing user demands without sacrificing performance. Proactively addressing these risks will be crucial for Blindate's success.

Use of AI

My project seeks funding for AI technology.

- ✓ For the database or source that I will use or will create, the consent of the persons whose works or information incorporated have been obtained.

I plan to use AI-generated content in my project.

What parts of your project will use AI generated content? Please be as specific as possible.

BlinDate integrates AI-generated content across multiple areas to enhance the dating experience. Our Facial Attraction Analysis uses AI to identify patterns in user-uploaded photos, matching individuals based on visual preferences. The AI Digital Twin Relationship Simulation creates a digital version of each user to simulate interactions and predict compatibility before real-life dates. AI-powered matchmaking eliminates manual swiping by analyzing preferences, behaviours, and personality traits to suggest the best potential matches. To enhance interactions, AI-personalized dating assistance provides conversation starters, tailored date ideas, and real-time coaching. After dates, AI-driven feedback and relationship insights refine future matches by analyzing user experiences. Additionally, AI-generated summaries and recommendations help users understand their dating patterns, offering insights to improve attraction and compatibility. Beyond matchmaking, BlinDate supports couples through AI-powered relationship tools, tracking relationship health, providing conflict resolution advice, and suggesting activities to strengthen connections. By automating the dating process intelligently, we aim to create a seamless, effective, and deeply personalized experience for singles and couples alike.

Do you have the consent of owners of the works that were (or will be) used to produce the AI generated portion of your projects? Please explain.

Yes, BlinDate ensures that all AI-generated portions of the project comply with ethical and legal standards regarding data usage and consent. Our Facial Attraction Analysis and AI Digital Twin Relationship Simulation rely solely on user-provided images and information, with

explicit consent obtained during onboarding. We do not use third-party copyrighted works or datasets without proper authorization. Any AI models utilized for matchmaking, simulations, or relationship insights are trained on publicly available data, proprietary algorithms, or licensed datasets that comply with applicable regulations. Additionally, our AI-generated summaries and recommendations are based only on user-provided data and interactions within the app, ensuring transparency and user control. BlinDate is committed to protecting user privacy and maintaining compliance with data protection laws to create a trustworthy and responsible AI-driven dating experience.

I am incorporating AI in my project in another way.

BlinDate incorporates AI in multiple innovative ways beyond just matchmaking. Our AI Digital Twin Relationship Simulation allows users to create a digital version of themselves that interacts with other digital twins to assess compatibility before an actual date. Additionally, Facial Attraction Analysis uses AI to analyze user-provided images and identify patterns in physical preferences to suggest better matches. AI also powers personalized dating insights, offering relationship advice, conversation starters, and compatibility predictions based on user behaviour and interactions. Furthermore, AI enhances user experience by automating profile verification, detecting inappropriate content, and optimizing user preferences over time. By leveraging AI across various aspects of the platform, BlinDate aims to provide a seamless, intelligent, and effective dating experience that saves users time while increasing the chances of finding meaningful connections.
