NexusBot (Discord Bot)

Currently making a Discord Bot that is going to be connected to a website where you can do a lot more with it (only me on the team atm)

Story

I have always wanted to make things for other people, and always given up because I usually get no support doing so, but I've been working on this Discord Bot for a couple days and not giving up on it, no matter what happens, even if my family believes in me or not. I am raising funds to make sure this bot works well in mine and everyone's image, I want this bot to be fast and really smooth in different servers.

About a couple months ago I used to go to college (Computer Programming), I didn't learn much from it, lost motivation, and lost inspiration, so I dropped out and started learning on my own and finding out things that I have not learned from college and now decently doing better than I did in college.

The reason why I care about this project because I really want it to go well and prove myself that I can create things with code and have fun with it. I also want some parts of my family to believe in me and the things that I want to do in the future.

Finally I do stream the development on kick (Krotaa) and twitch (KotazzX), They show the development of the bot (if interested) and do my best to debug and fix and test things.

Risks and challenges

The risks and Challenges would be making the Website part, it's been quite a long time since I've worked on making a website and I'm hoping it'll be done smoothly and fast. The other risk would be making an AI, that's something I have never done before and hopefully get it done.

Funding period

Jan 18 2024 - Mar 17 2024 (59 days)

Use of AI

I plan to use AI-generated content in my project.

What parts of your project will use AI generated content? Please be as specific as possible.

I want to try and use AI for people to interact with the bot and learn about me and the bot a bit more than just a creator and a machine

Do you have the consent of owners of the works that were (or will be) used to produce the AI generated portion of your projects? Please explain.

I will be attempting to make my own AI
