## Story

We are a student run tutoring company. What we do is provide university students with the opportunity to tutor in order to help fund their education.

We work in the USA and Canada!

University costs in Canada have risen to ABOVE \$10,000 per year in Tuition ALONE!!! Students need access to flexible jobs that help them make money while attending school.

As we grew, it became difficult to manage students and tutor matches.

Last year we spend \$4,000 building a software, however we couldn't afford someone locally, and that's all the money we had, so we were forced to outsource to India. We got scammed, the company we hired gave us the runaround, refused to listen to our instructions, took four times longer than they told us, did almost no work, and we were given a piece of junk that is unusable.

We have found a local programmer who can build us the program we need. It will help optimize tutor/student matches, and be able to give more work to University students and improve efficiency.

By pledging our project you are helping with 3 goals:

1. Provide work to a local programmer.
2. Provide jobs for university students needing work.
3. Provide affordable tutoring for students/families who need it.

## Risks and challenges

Our software was already planned, but a company in India scammed us.

Took our money, and gave us junk. However the situation gave us the opportunity to learn what to avoid in the future. We have since planned and fine tuned all the specifications. We have found a local programmer that has references and provided samples of his work.

### Funding period

Sep 10 2014 - Oct 13 2014 (33 days)

We don't foresee any challenges or obstacles, because we already did this once and learned how the entire software planning process works.

The only real risk is that it will take longer to complete. The programmer said 2 months, but with delays in programming it could be safe to say that up to a 90 day window could be required.
