Story

Algorithms, ranging in function, utility and sophistication, govern our modern lives. From equations that determine help decipher the complexities of the financial market; to simpler algorithms that have helped the lines to follow relatively free from spelling mistakes. Commercial and societal order is enforced through the proper functioning of algorithms. The inception of algorithms in the right place help simplify complex business decisions, that if otherwise left to other devices and methods can prove to be a costly mistake for business owners. This is what motivated the team at Reason Square to tackle inefficiencies that sucks away close to \$150 billion of the global economy. The term coined by LinkedIn in a survey conducted through an interaction of over 277 million professionals, paired with a PwC database of 2,000 employees. (Also Using Algorithms we presume...) is talent mismatch. Talent mismatch occurs when a candidate ideally suited for an organization, who typically has passed the strict internal controls, interview procedures, induction processes and training, simply does not deliver what the employer expected.

In spite of these rigorous procedures, taken both by staffing agencies, who are paid a lucrative fee to conduct their searches, and employers themselves, talent mismatch is proving to an opportunity cost of a significant standing.

The most significant loss occurs at the productivity level, which was quantified by LinkedIn at being \$130 billion. The research quotes the following: "The research found a strong correlation between the adaptability of the talent in a particular country and the performance of its companies. If markets were better at matching talent with the right opportunities, this could unlock as much as USD\$130 billion of productivity in the 11 markets studied (including USD\$65.6 billion in China, USD\$29.3 billion in the US and USD\$11.7 billion in Brazil). Avoidable recruitment costs of USD\$19.8bn2 –this lack of access to the right talent is driving up the cost of recruitment for employers today. The longer time taken to find the right candidates, and the increased likelihood for mismatched talent to leave sooner are costing companies in those countries USD\$19.8bn in avoidable recruitment costs."

We've identified a \$150 billion dollar worth problem that very few have managed to solve in a meaningful way.

Funding period

Sep 25 2015 - Oct 25 2015 (30 days)

The premise behind our software, was to find the answers to the following challenging questions

- What can be done to lower this significant opportunity cost
- How can we use modern technological tools to alleviate this burden looming over companies that have yet to shown immunity, irrespective of their size, geographical location and industry.

We hoped to develop a platform, which centers on the following principles:

➤ Preventing Talent Mismatch within organizations ➤ Providing a software tool capable of doing much more than a simple Applicant Tracking System (ATS) would ➤ Keeping in mind the productivity and revenue measures of our clients and ensuring that we provided them the tools to help better manage their organization ➤ Giving our clients a competitive edge, driven by the sophistication of the software and its ability to solve complex recruitment problems ➤ A software which not only tracks applicants, but also provides strategic guidance ➤ Can offer a holistic, modular approach towards recruiting which includes every key element of the value chain.

Hired Square is our technological response to the challenges recruitment agencies face on a daily basis.

Risks and challenges

Strategic Plan

Strength

- Patent Pending Algorithm with the capacity to become an integral part of the business intelligence process
- Unique and Intuitive interface which motivates recruiting agencies to keep utilizing Hired Square
- Focus on customer service and sales approach which identifies and targets weak points within the recruiting process in hopes of optimizing business performance and increasing profitability
- Integrating with potential partners, modular platform which can seamlessly fit into existing software and techniques.
- Enhancing existing within ATS and HR Management technology with a value added approach

Weakness

- In the process of collecting sufficient user base currently to test and reform the beta version, in hopes of making integral software improvements
- Need to develop and invest strong core internal operational and marketing competencies, which help, position Reason Square for growth and partnership opportunities.

Opportunity

- Severe lack of business intelligence and CRM integration within current platforms that limit the functionality of software
- Current software emphasize management of candidates from a superficial stance without considering the elements which make for success on a more holistic level
- Limited functionalities of available software that do not integrate well with existing data, fragment the recruitment process and create redundancies, which lead to an inefficient way of processing the data.
- Market demands a greater emphasis on customer service which many market leaders have gone to neglect by sheer number of volume.
- Partnership opportunities exist with a variety of channels within the B2B market which helps increase our customer base through less incremental efforts on our end.

Threats

- Highly saturated market with many key players and two market leaders that have captured a substantial amount of market share
- Low barriers to entry for those with simplified ATS and Recruitment software
- Bullhorn and ICIMS gathered valuable data which allows them to integrate functionalities from a modular standpoint towards their existing customer base
