Story

Welcome to 'Universe'

Funding period

Feb 26 2015 - Apr 27 2015 (60 days)

- More information about 'Universe' can be found by visiting www.theuniverse.io
- Join the '[Universe Community](#)', share your ideas and discuss the 'Universe' project with millions of others.

Introduction

'Universe' is a next generation operating (eco) system. Its developmental philosophy comprises the principles of open-source and open-content. Furthermore, it includes a unique system design and innovative conceptual engineering. 'Universe' will revolutionize the information technology sphere and significantly change our understanding and interpretation of technology in general.

Primarily, the 'Universe' operating (eco) system is developed for human civilization; to create an ultra-modern technology which is affordable for all of Earth's inhabitants. The main goals of 'Universe' are as follows:

- to develop an ultra-fast, secure and independent 'Universe' network

- to maintain privacy and secure data transmission, including all data transmitted inside the 'Universe' operating (eco) system;

- to develop an independent community able to carry out significant architectural decisions, which will shape and develop 'Universe'

- to filter and censor incoming information controlled by the independent 'Universe Community', and render it freely available to all users of the 'Universe' operating (eco) system

- to represent quality and authentic information, significantly reducing search times and the processing of functions, isolating spam and other useless, annoying and dangerous information sources

- to develop innovative software programs for educational, medical, financial, governmental, public and informational sectors

- to utilize Open-Source philosophy, offering a security guarantor to 'the Universe' operating (eco) system; ie. foreign tracking algorithms, the mining of illegal data and the manipulation of personal information

- to utilize an Open-Content philosophy, avoiding the problem of copyright and providing access to different information sources, eliminating the problems of piracy and the illegal use of information

- to reduce the level of anonymity within social media, giving people of all ages, nationalities and genders the opportunity to communicate with each other, within a secured environment. (This will significantly reduce cybercrime and provide children and adults with a secure system, confident in the knowledge of who they are talking to)

Why do we need your help?

The 'Universe' operating (eco) system aims to develop a professional and legitimate community, in which everyone can freely express their opinions and take part in the 'Universe' project. In becoming a participant of the 'Universe' project, you will be able to discover a truly new technology.

In addition, the 'Universe' operating (eco) system is not a commercial product and will be available universally free of charge. Unfortunately, without financial assistance, our project cannot fully develop. We ask for your help in realizing our vision for the 'Universe' project, with this opportunity to engrain your name in history.

If you would like to help in other ways, please read this [article](#) to find out how you can support the 'Universe' project.

What will you use the funds for?

All funds will be spent on the development of the 'Universe' operating (eco) system and support the 'Universe Community'. Participants in the 'Universe' project will be able to learn more about the 'Universe' operating (eco) system and follow the development of the project by visiting: www.theuniverse.io

Why now?

Our world is undergoing major upheavals. People have lost trust in incoming information and software which form an everyday part of their

lives. We regularly hear of new intrusions into our privacy by means of the latest technology. Are new technologies created for us or are they working against us? The 'Universe' operating (eco) system is a revolution in the field of new technologies and the 'Universe Community' will demonstrate to the world that technology can be trusted and safe. There are many ways in which the 'Universe' project can benefit us all. For more information on this topic, please visit: www.theuniverse.io

Risks and challenges

The 'Universe' operating (eco) system is a both a complex, but fascinating technology. Many projects cannot exist without strong public support, where the main risk is weak community feedback. We aim to build a strong community where this risk is minimal.

Many would say that this is an ambitious project. Any innovative idea, in essence, is already ambitious. How many examples are there of individuals who change the world and bring incredible technologies to life? Yet, all these innovative technologies and ideas require a deep understanding and patience. Please be patient; we are working hard to bring 'Universe' to life.

In addition, such projects require significant financial support; thus the creation of the final version of the 'Universe' operating (eco) system will take several years. As a result, we have decided to create the 'Universe' operating (eco) system gradually, by introducing each new version with substantial changes. In three years, we will use the Kickstarter funds collected to develop a prototype of the 'Universe' operating (eco) system. This is our minimum goal; to prove that the 'Universe' project has the right to exist. A prototype of the 'Universe' operating (eco) system can be installed over the top of existing operating systems, as an application that will have its own infrastructure. In the future, with each subsequent version released, the 'Universe' operating (eco) system will become a totally independent system; you will be able to fully control electronic devices without any third party software.

Your financial assistance will help the 'Universe' project develop more quickly.

As a result, we aim to see a fully-fledged 'Universe' operating (eco) system in the very near future.
