Story

NetWatcher is a creative application designed to provide surveillance over Internet on specified computer and tablet devices. All screens of monitored devices are monitored, so if you attach a video camera to your computer or tablet, the surrounding environment can be monitored remotely from any corner of the world.

More details can be found at <http://www.netguarder.com/>

NetWatcher originally emerged into market in 2003 via NetGurader and holds copyrights authorized by National Copyright Administration of the People's Republic of China, it was limited to monitor local network connected computers. Currently the completely new designed NetWatcher makes a breakthrough in network boundary and gets involved into modern life with network everywhere.

We have developed the whole version on Windows platforms. On each popular tablet and mobile platform, we need develop a NetWatcher agent, **our project here is to collect money to develop a version on Android platform only and make a small market promotion** if it is possible.

For Families

Parents can use NetWatcher to observe and control children's computer usage and internet surfing in very close and secret manner. It's a powerful deterrent force for kids' better behaviors.

Families can also connect extra video cameras to NetWatcher agent enabled devices and build up a remote surveillance system easily.

For Enterprises

Many companies get to know many employees work with a little effort for real tasks, while they spend a lot of energy on surfing Internet in working time. According to American PMI (Projects Management Institute) 2003 report, 75% companies take measures on network surveillance in order to enhance enterprise work efficiency. NetWatcher is such a kind of supervision solution, designed for managers and technical people.

Funding period

Jan 7 2016 - Feb 26 2016 (50 days)

Increasing employee productivity and human resources efficiency can be gained positively through better control and communications. NetWatcher not only conducts remote screen monitoring during working hours but also facilitates one-way communication to monitored devices. End users of monitored devices can get constant messages from Master Monitor Console.

Risks and challenges

We have released Windows version on <http://www.netguarder.com/Product/Trial.aspx>, the risk is on Android development and infrastructure support for mobile platforms.
