Story

Is there such thing as a warranty application (app)? If there is not yet an application for mobile devices and computers of all types that allows purchasers to scan their receipts and warranties, in order to have the information sorted and cataloged for later retrieval and review, then there certainly should be one created soon. An application that contains relevant and useful data, which one would be required to provide, in order to qualify for a replacement item as part of warranty coverage would be of the greatest possible value. Items necessary for warranty:

Actual receipt containing the following details:

Serial number of product

Date of purchase

Store ID

Method of Payment (Debit Card, Credit Card, Cash)

Universal Price Code

Item Identification Number

Transaction Number

The reason a person would need this information and an application of this type, is in case a product stops working or begins to malfunction.

Why should someone need to buy a replacement product if the item they purchased is fully covered under a warranty? Even though a warranty may state that a replacement will be provided.

The receipt is the most important requirement, along with the actual product for warranty redemption of a purchased item. Usually for electronics and items that use electricity; such as cooking grills and microwave ovens, the manufacturer / supplier will want to diagnose issues, via the internet or request that the purchaser run various tests, before a replacement item can be provided.

Some companies will want the old / original product to be sent back / returned before a new / replacement product will be given to the customer. Some companies will send packing slips to be affixed to the box for the item to be returned. Other companies, depending on the purchased product, will only want the electrical cord / plug to be sent in by mail.

Funding period

Aug 25 2015 - Sep 24 2015 (30 days)

For certain items, such as printers, fax machines or old scanners, the manufacturer may only request compliance with smart recycling practices that adhere to municipal and federal environmental standards.

When requesting assistance with a purchased product you (as the customer) should note the date and time of each telephone call, during which you express a complaint about your purchased product.

These details are very important and should be provided to the manufacturer upon your request for a replacement item. Supply this data demonstrates your effort to follow a reasonable plan to obtain assistance with your product, prior to requesting a new one.

You may not always get a new product. Instead you could receive a refurbished item, which may not necessarily be of the same quality, as the one you initially purchased.

At the time of purchase, you can usually buy an extended warranty for your product. Many credit card companies usually provide an additional year of product / service coverage, in addition to the initial year of warranty coverage offered by the manufacturer, as a supplement to an extended warranty plan. You should contact your credit card company directly, to find out details about the unique warranty option coverage, which is provided under your credit card member's policy.

In the Warranty Software Application there could even be a special feature of the technology system, which would notify you 30 or 60 or 90 days, before your warranty and / or extended warranty expiration date, to offer you the opportunity for test and / or use your product, to determine if it is still functioning properly.

Additional concepts to be integrated into the Warranty Application include: vendors / stores / manufacturers' can all sell extended warranties, directly through the application.

When the name of the product manufacturer is identified on the receipt, the application would source from participating / registered vendors and offer the option for extended warranties to be purchased, via the application. This process could offer great opportunities for unlimited revenue for each store or manufacturer extended warranty sold through the Warranty Application.

Risks and challenges

Risks include competitors producing a similar or the same Warranty Application before I can get mine developed and submitted to the marketplace. Challenges include fees for items, such as a patent and a Proof of Concept demonstration, as well costs for registration of a trademark on the concept and a copyright for the idea and content composed to explain it.
