Story

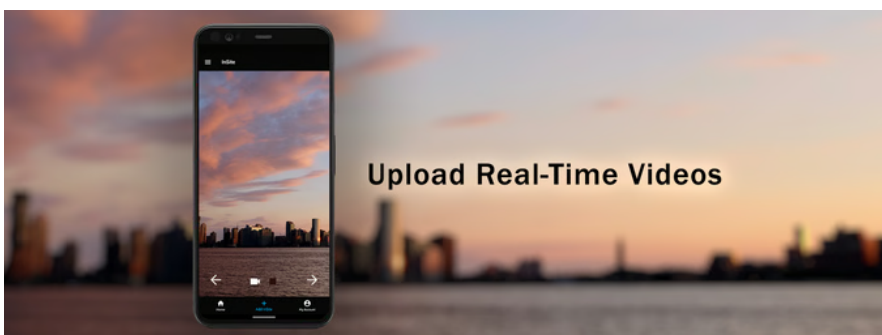

Funding period

Jul 28 2020 - Sep 26 2020 (60 days)

So What's The Problem Here?

We get most of our daily information and news from our social media platforms. We've become accustomed to wasting countless hours through a form of escapism, and in large part control very little of what we see on our platforms. What's worse is that people get most of their news from a social media platform that have likely sourced its information from heavily biased/ illegitimate news sources or from popular pages with large followings who often propagate fake or unverified information. From there, the information is molested within the climate that is social media and turned into memes, trends, challenges, and jokes. Not only are sources of information in large part inaccessible to people, but this hierarchy and centralization of information presents us with numerous challenges that handicaps our "democracy of information" and limits our society to focus only on what is given to us with no other sources to get reliable news from.

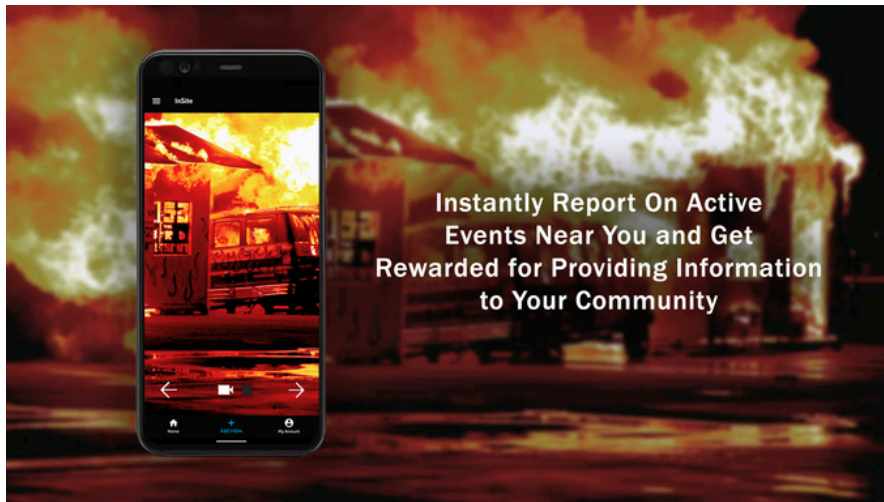

Popular news corporations and information conglomerates have biases.

It's a problem we all know exists and until now, we have just had to accept it. Whether it's the personal biases of reporters, the ideologies of the people who fund them, or the numerous 3rd party institutions who oversee it all, we see this issue in our news every day. Time after time, news is spun to fit the narrative that the broadcaster wants, often polarizing issues based on ideological preference. All too often, key issues are not reported on or are put on the back-burner never to be addressed or heard because they either do not fit the existing dialogue or simply because there is only so much that can be aired at any one time. Rather than stubbornly cling to the constricting nature of a centralized news structure that limits the free flow of information, our world should be shared collectively by the very people experiencing it! To put the spread of news and information in our hands!

So What Are We Doing About It?

Introducing InSite, the revolutionary News **Sharing app** designed to provide news and information first hand by people just like you and I! The aim of our platform is to remove bias and censorship, in order to give communities control over what they see and what gets reported on. Whether in Toronto, London, Mexico City, or Tokyo. A location based verification system will allow users to "upvote" or "downvote" posts based on eye-witness accounts of events globally, letting users decide, what is most important to them. Connecting you, your community and the world, while leaving the power of news and information in your hands!

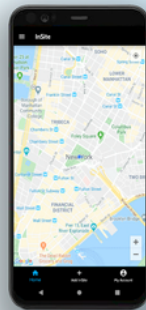

Dynamically Updating Map

See New Events as They are Posted

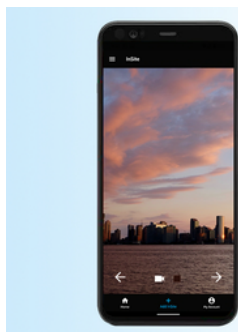

View Posts By Tapping on Their Icons

Icons Show The Type of Content Posted

So How Does This All Work?

The main interface of the app contains a map of the user's position, and shows nearby posts, allowing users to see what is going on in their community. This also allows users to navigate to the location of an event and verify its truthfulness. Users may also navigate between videos, categorized into two sections; *Happening Near Me* and *Trending Worldwide*. The *Happening Near Me* tab takes the user to the closest "trending" posts to them, and allows users to scroll through videos, sorted by proximity. The *Trending Worldwide* tab takes the user to posts with the most engagement and significance based on community consensus across the entire globe, allowing users to scroll through posts sorted by view count and location.

Post and Share Videos

InSite's Quick and Intuitive User Interface Allows You to Share News Important to You!

On a post, users are presented with a full screen video that scales to the size of your device. Along with the video, users have several items that

they can interact and engage with.

- A *Verify This Post* button allows users witnessing an event within a 100-meter proximity to verify the information and prove its validity
- *UpVote* and *DownVote* buttons allow the users to add or remove from the post's reputability, depending on factual validity of the story's importance or credibility.
- A *Location* button that allows users to open a world map and see where the event took or is taking place
- A *Share* button that lets users share a post to other social media platforms or through text and email
- A *Related Articles* button that displays published articles relating to a story, and allows users to add or vote on articles that they think relate to or are about the post
- Tags for the post are displayed that allow users to tap on them and explore other posts with the same tags

These options allow for a versatile and adaptive news sharing platform, where users can decide what is most important, and where information can flow with no fear of being buried by other parties. InSite uses a completely decentralized system that allows anybody, anywhere, to share the news that **matters**. With dynamically scaling cloud servers and databases, as well as a three-day lifespan for posts that lack engagement, the download and upload of information will never be slow and additionally, can never be falsified as information must go through the app and cannot be downloaded or uploaded externally, ensuring both geolocation and time stamps for videos to always be referenced back to. InSite also offers an anonymous mode, that enables users to post without their information available to other users. These measures ensure that news maintain credibility and integrity, untouched by individual biases or malicious intent.

So You're Saying I Can Get Paid For This?

InSite has a built-in cryptocurrency reward system, where users are paid* to verify, interact with, and post information. When a user creates a new post, and as it gets more views and more verifications, the poster is rewarded for engagement they generate. Similarly, as a user's *Rep* increases, so will their pay, and any interaction with the app including posting and verifying of any sort, including videos and articles will impact this *Rep* and therefore affect the reward amount, incentivizing users to post reputable and factual news for the benefit of their community.

With Your Help, Here Is What You Can Expect Next!

As we continue to build and improve InSite and its ecosystem, we will add more categories to refine what news you want to see. We also will have machine-learning algorithms, that will build you a stream of posts that you both find interesting and at times, can challenge your existing views to give you an unbiased lens on any story.

InSite currently has a completely working prototype and, with your help, we can turn that prototype into a beautiful and seamless user experience that does away with bias, censorship, and can in-fact support big media for **OUR** needs. We plan to release a *Sister* app that goes along with InSite that allows journalists to compose and create news stories with accompanying articles and sources in order to share a more cultivated stream of news that users can choose to interact with. This journalist program will pay journalists the same way: for engagement and honest media. It will act as source for humanitarians to build awareness, for freelance journalists to tell a story and for regular people like you and me to inform ourselves of things we otherwise wouldn't know or even think about both in our communities and throughout the world. Until now, social media has done a fabulous job of making the individual social. What InSite aims to do, is to make news social. We all need some InSite!!

Risks and challenges

Making an app always includes risks, but InSite is special. The main Risk for InSite is user density. Without enough users, the app faces an issue of "fizzling out", but we are confident we can combat this with our amazing marketing team. This same issue propagated through Facebook, Instagram, and SnapChat, and like them we too can succeed with your help!

A challenge we face is that of crypto. We plan to reward users with a brand

new ICO for their involvement in the dissemination of information.

Currently we are building our Crypto rapidly to make sure we are prepared for launch, and we do not foresee any issues. In the theme of InSite, we aim to be as transparent as possible!

Long-lasting design

InSite will be around for decades to come, with no plan to quit.

Something else

InSite aims to create an environment through which users can share all types of information, in doing so we aim to improve user education on every situation occurring around them. With this, we include issues plaguing our planet.
