AI is Moving Fast—Don't Get Left Behind!

Why AI Should Be Accessible to Everyone

AI is reshaping work, learning, and communication at an unprecedented pace. But without accessible education, millions risk being left behind. The problem isn't AI itself—it's the lack of practical knowledge on how to use it effectively. While 80% of people have heard about AI, most don't understand its full potential. Without hands-on experience and real-world applications, AI will deepen the divide between those who adapt and those who don't.

Why This Matters

- ✓ **Economic Survival** – The job market is evolving. Without AI skills, many risk becoming obsolete.
- ✓ **Global Inclusion** – AI should break barriers, not create them. If only tech-savvy users benefit, entire communities will be excluded.
- ✓ **Access to Knowledge** – AI can educate, inform, and empower, but only if it's simple and accessible to all.

Making AI Simple & Accessible for All

We all know that AI is powerful, but complexity, typing barriers, and language gaps leave many behind. myinsightiq solves this with speech-powered AI, making AI easy, inclusive, and multilingual.

- **For Non-Tech Users** – [Speak your question](#), get instant AI insights—no typing needed. Plan trips, budget, track fitness, and more with ease!
- **For Accessibility** – People who are not able to type can [talk to AI](#) instead of struggling with a keyboard!
- **For Multilingual Communication** – Speak, Translate, and Transcribe [conversations](#) and share instantly, breaking language barriers!

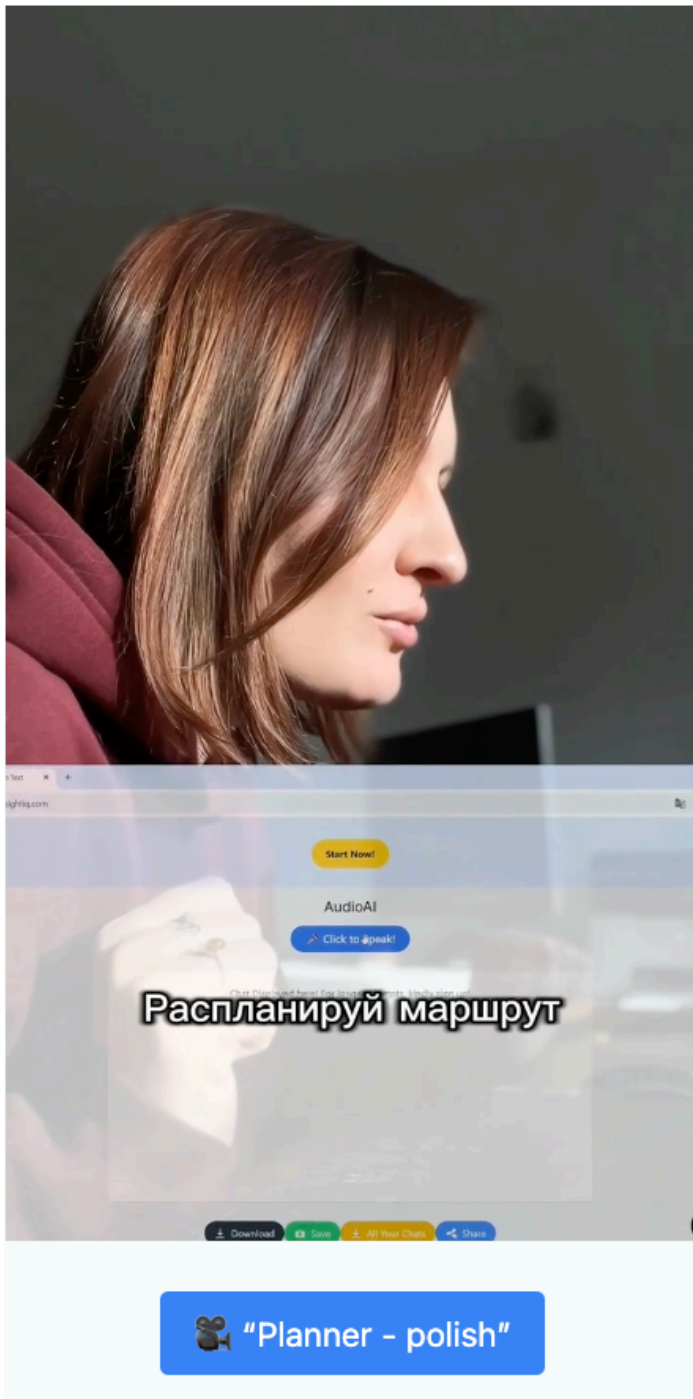

myinsightiq

At myinsightiq, we're making AI intuitive, voice-driven, and easy to adopt—eliminating barriers to learning and accessibility. Here's how:

- ✓ **AI-Powered Speech-to-Text** – No typing needed. Just speak and get instant insights.
- ✓ **Real-World AI Applications** – Learn how AI can enhance productivity, creativity, and efficiency with collaborating via hands-on use cases.
- ✓ **Multilingual Support** – AI should be for everyone. We support multiple languages to ensure global access.

Use Case: Business Advisor

Understanding customer acquisition is key to business growth—but it can be overwhelming without the right tools. Our upcoming Business Advisor will simplify this process, helping users attract, engage, and convert customers with ease.

Here is a scenario where we are using the Advisor to explore 4 stages of Customer acquisition:

- **Awareness/Discovery:** Helping potential customers discover your brand or product.
- **Interest:** Identifying and nurturing prospects as they engage and show curiosity.
- **Evaluation:** Supporting customers as they assess solutions before deciding to purchase.
- **Purchase/Conversion:** Guiding the final step where prospects become paying customers.

With AI-powered insights, this tool will generate personalized marketing strategies, recommend acquisition tactics, and help businesses track and improve their performance—simply by speaking to mysightiq.

Technology

mysightiq is built to make AI simple, accessible, and practical for everyone—no technical skills required. The technology behind it is designed to break down barriers and empower users through speech-based AI interactions.

- **Instant Insights with AI** – Using LLM's and Webkit, mysightiq processes your spoken words in real time, generating clear, relevant insights to help with decision-making, learning, and brainstorming.
- **Effortless Speech-to-Text Conversion** – With advanced speech-to-text APIs, mysightiq turns your voice into instant text, making it easy to document ideas, share notes, and stay productive.
- **Breaking Language Barriers** – AI-powered multilingual translation ensures that users can communicate across different languages, making AI more inclusive and globally useful.

Budget

We've structured our Kickstarter pricing to cover key costs while keeping mysightiq sustainable. Funds go toward R&D, AI development, server resources for LLMs and speech-to-text, and labor—helping us deliver accessible, practical AI insights for everyone.

Flexible Plans for All

Our reward tiers integrate LLM models for enhanced AI interactions. As we expand, we'll develop tailored solutions like the [Business Advisor](#) for industry-specific needs.

- **Free Plan** – Essential features, speech-to-text, and multilingual support at no cost.

- **Starter Plan** – Unlimited audio prompts, browser compatibility, and enhanced language support.
- **Advanced Plan** – Custom pricing for teams with collaborative tools like WhatsApp, Slack, LinkedIn, and Zoom, plus personalized AI Assistants.
- **Founder's Circle** – Full AI integration for businesses with a native Android & iOS app, seamless cross-device compatibility, and workflow automation.
- **Partner Plan** – AI-powered business tools, strategy templates, marketing automation, and CRM integration for customer acquisition and outreach.

Language Support

Currently, myinsightiq supports AI conversations in up to 30 languages in Google Chrome browser, and we're actively working on adding multilingual support for more languages.

How We Protect Your Data

Capture – myinsightiq records and transcribes your speech in real time, processing the data securely through AI-powered speech-to-text technology. Audio data is not stored and is deleted within seconds after transcription.

Local Storage – Transcripts are encrypted and stored securely on your device, preventing unauthorized access.

Transmission & Sharing – myinsightiq only transmits transcripts when you choose to share them. You can collaborate across up to 10 platforms, including WhatsApp, LinkedIn, Zoom, Discord, Google, Slack, and more. If you opt to use third-party AI services, transcripts will be sent only upon your request. In the future, we will support multiple AI providers, giving you the flexibility to choose AI services that align with your privacy preferences.

Our goal

Imagine a world where AI isn't just for tech experts or big companies—it's for you. Whether you're a student, a creator, a professional, or part of a community often left behind by technology, myinsightiq is built for you. Right now, AI is at a turning point, much like the early days of the internet. Together, we have a rare chance to shape its future—to make it **simpler**, **more accessible**, and **truly useful**.

Still have Questions?

Follow our discussion thread on [Product Hunt](#).

**Harper Young**
How does the AI maintain accuracy when dealing with different accents or speech patterns? Overall great job.
 **Upvoted (13)**  **Award**  **Reply**  **Report**  **Share**  **2d ago**

**myinsightiq** 
@harper_young Allow us to use a scenario where we are saying hello in Chinese as we speak to myinsightiq

It performs well overall. In the example below, the system mistakenly interprets a Chinese greeting as a location when spoken in English. However, switching to Chinese captures it accurately.

English Default Language
You: Niihau
myinsightiq: Niihau is a privately owned island in Hawaii and is sometimes referred to as "The Forbidden Isle" because access is restricted to outsiders. It is known for its largely untouched natural beauty and unique cultural heritage. If you have any specific questions or need more information about Niihau, feel free to ask!

Switched to Chinese Default Language
You: 你好
myinsightiq: 你好！有什么我可以帮助你的吗？
If able to, kindly select a language and test **myinsightiq**. Let us your experience.

Risks and challenges

Delivery Risks and Challenges for myinsightiq

While we are committed to delivering myinsightiq on schedule, challenges may arise in software development, AI integration, and scaling infrastructure. I will stay in regular contact with backers about our progress, sending release updates and sharing research and information about myinsightiq progress.

myinsightiq is designed to work seamlessly with third-party AI models, and while we prioritize privacy and security, each provider has its own policies. Users will need to agree to the privacy terms of their chosen AI provider. In the future, we plan to support multiple AI models, allowing users to select the one that aligns best with their privacy preferences.

Our goal is to ensure a reliable, secure, and user-friendly AI experience, and we are prepared to address challenges to make that happen. 🚀

Reusability and recyclability

myinsightiq is a fully digital AI tool that leverages the devices people already own—smartphones, tablets, and computers—eliminating the need for additional hardware, packaging, or waste. We prioritize sustainability through optimized cloud computing, energy-efficient servers, and reusable AI workflows. Users can save and repurpose AI-generated transcripts, reducing redundancy and enhancing efficiency. By integrating with WhatsApp, Slack, and other platforms, we enable seamless sharing, minimizing digital clutter.
